Amazing Animations

DRAGON'S LAIR II

TIME WARP

Princess Daphne has been spirited away to a wrinkle in time by the evil wizard Mordroc who plans to force her into marriage. Only you, Dirk the Daring, can save her.

Transported by a bumbling old time machine, you begin the rescue mission. But you must hurry, for once the Casket of Doom has opened, Mordroc will place the Death Ring upon Daphne's finger in marriage and she will be lost forever in the Time Warp.

Be the first to play the all new Don Bluth animated adventure! Dragon's Lair II: Time Warp features full-screen animation and digitized sound with more scenes than any previous animated adventure.

"Super-Charger is the MS-DOS Emulator of Choice"

—Milt Creighton

Current Notes Magazine

Plus Other Outstanding Products for the Atari

Super Charger

- The Only external IBM emulator.
 - Norton factor of 4.4.
 - Atari's memory can be used as a Ram Disk or Expanded Memory.*
 - Runs Windows 3.0.
 - Free 1Meg of memory included.
 - 1Meg of memory can be used by your Atari as a Ram Disk.
 - Free MS-DOS 4.01 included.
- \$450.00**

Omniswitch

- Two monitor ports [DB9 & DB15] allow you to use Multisync Monitors right out of the box.
- Omniswitch functions as a monitor switcher for standard Atari monochrome and color monitors.

- Enables you to use two external floppy drives (2-3.5", 2-5 $\frac{1}{4}$ " or 1-3.5" & 1-5 $\frac{1}{4}$ ").
- Custom designed software allows you to change resolution without re-booting.

\$89.95

Acer Monitor

The Acer multisync monitor model 7015 supports an BDDx6DD resolution and accepts both "TTL" and "Analog" signals. It has a 14" diagonal display with a .31mm dot pitch. The Acer comes with a tilt swivel base and a non-glare etched screen. The Acer monitor works on all Atari ST** and TT line of computers.

\$449.00

*Call for details.

**Requires a monitor interface like the Omniswitch.

SUPERCHARGER V1.4 BREAKS THROUGH THE BARRIER

Full MS-DOS Compatibility With Real Time Multi-Tasking Plus EXPANDABILITY

We will buy your
PC-DITTO II™
OR
PC SPEED™
FOR
\$75.00

When you purchase your SuperCharger directly from RIO Computers
Offer good thru Dec. 24, 1990

**NO INTERNAL
MODIFICATIONS
REQUIRED**

**PLUGS DIRECTLY INTO THE
DMA PORT OF YOUR
COMPUTER**

MS-DOS INCLUDED

SUPERCHARGER OPTIONS SOON TO BE RELEASED

SCplus/NET - Full networking board

- Connect DOS and TOS programs or files under Novell™ etc.
- Transfer rates of 2.5 Mbits/sec.
- Plugs into existing expansion connector with no soldering required.

SCplus/286 - Turns SuperCharger into a full 286 co-computer

- Runs at 12 MHz on a pure AT chip set
- Comes with 1 Meg of RAM expandable to 4 Meg - full EMS support
- Contains true AT expansion slots - accepts ANY expansion card
- Provision for an 80286 co-processor
- Plugs into existing V30 socket with no soldering required.

SCplus/386 - Turns SuperCharger into a full 386 co-computer

- Runs at 16 MHz on a pure 386 chip set
- Comes with 1 Meg of RAM expandable to 4 Meg - full EMS support
- Contains true expansion slots - accepts ANY expansion card
- Provision for an 80386 co-processor
- Plugs into existing V30 socket with no soldering required.

TRUE MULTI-TASKING

Connect several superchargers together to run different programs concurrently

TOOLBOX

Programming interface to allow programmers to develop their own background tasks.

HOT KEY

Allows TOS/DOS switching without rebooting.

LAUNCHER

Execute DOS programs directly from your TOS window.

- RUNS CGA AND HERCULES
- EQUIPPED WITH 1 MEG RAM
- USES EXISTING MOUSE AS DOS MOUSE
- SUPPORTS 5.25" OR 3.5" AS SECOND DRIVE
- PRINTS TO THE ATARI LASER FROM DOS
- SUPPORTS ALL HARD DISKS WITH AHDI DRIVER
- SUPPORTS ALL PARALLEL PRINTERS
- USES ST SERIAL PORT UP TO 9600 BAUD
- ATARI 3.5" DISK READS/Writes AS 720K OOS
- SOCKET FOR 8087-2 CO-PROCESSOR
- USES SUPERCHARGER'S RAM AS 1 MEG RAM OISK
- USES ST'S RAM AS RAM OISK IN DOS
- RUNS 286 AND 3.0 WINDOWS
- BUILT IN BUS FOR FUTURE EXPANSION
- SEPARATE 5V DC SUPPLY
- INSTALLATION MANUAL
- 12 MONTH WARRANTY
- SHIELDED ABS CASE (FCC CLASS A CERT.)
- ONLY 6.25 X 7.25 X 2.25 IN.

SuperCharger - Only

\$450

V1.4 Upgrade Kit - \$19.95

Phase-4

PHASE-4 ANIMATION SEQUENCE by Lexicor Software Inc.

Watch the latest in rendering software at work! The Phase-4 3D animation package, profiled on page 22, was used to create this sequence. Double-click on the DEMO folder, then go into the LEXICOR folder. This software is copyrighted by Lexicor Software Inc. START assumes no responsibility for the performance of this software.

TIGER CUB DEMO by Dr. T's Music Software Inc.

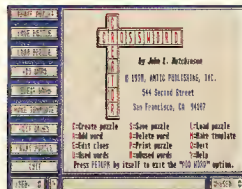

This MIDI sequencer was reviewed in November 1990. You'll find TIGERARC.PRGM in the DEMO folder on your START disk. Follow the disk instructions to un-ARC this file, but note that it requires 537K of disk space; you will need a double-sided disk or a hard drive for the destination files. Double-click on README.DOC for information about the demo. Tiger Cub Demo is copyrighted by Dr. T's Music Software Inc. START assumes no responsibility for the performance of this software.

Tiger Cub

CROSSWORD CREATOR UPDATE by John L. Hutchinson

This upgrade to the ever-popular Crossword Creator, which appeared in the June 1990 issue, supports those nearly Epson-compatible printers that have a problem printing puzzles in draft mode. All files are in the folder CROSSWRD.

THE EDITOR'S DESKTOP

The Year In Review

Fill in the blank: "19____ Is The Year Of Atari." For the past several years, overzealous Atari-magazine editors have announced that the coming year would be the big one for Atari, the year the computer maker would really make its mark. This misplaced enthusiasm hasn't been without reason. With all the hot new hardware either planned or actually released by Atari in that time, every year did indeed seem like the year.

1990, as it turned out, would not be one of those years. Unavailable products slowed domestic sales, and new hardware releases suffered delay after delay. Even the Lynx, though readily available, suffered from a lack of compatible games.

But, finally, there's a glimmer of hope on the Atari horizon. The STE and the TT were released, the Lynx has plenty of game cartridges, and Portfolio sales continue to be healthy. 1991 may not be the year of Atari, but they're going to make a damn good bid for it.

The Year In START

A lot can happen in a year, and, as many of you know, plenty has happened at START. Major changes in staff and design, conversion to desktop publishing and the recent inclusion of Antic magazine mark some of the highlights. And can you believe we've published well over 100 product reviews? In a recent conversation with one of our advertisers, I decried the lack of space that START can give reviews because there are more products out there than we have editorial room for. The advertiser shot back with, "Oh, come on, hardly anything has come out this year." One need only open up the pages of this month's issue to see that's not the case.

And Speaking Of The TT

After a long wait, we finally got our hands on a TT, Atari's new computer based on the Motorola 68030 microchip. START's TT includes 2MB of RAM (expandable to 27MB), a built-in 40MB hard drive, and a clock speed of a screaming 32MHz. It also includes the new TT Desktop, which goes beyond a simple GEM enhancement.

The TT looks like a hot machine and promises to be big seller for Atari, but I'll not go into any great detail here. Watch for a full review in the February 1991 issue.

The START Disk

When you boot up this month's START disk you'll notice a significant difference from past disks — there's more to it, twice more in fact. The START disk is now double sided and packed with more great programs and utilities than ever before.

Take Total Control Of *TIME and SPACE*

PHASE-4™ Solid Object Motion Control and Animation System

- Opens a 4th dimension in which you actually cut, copy and paste time itself
- View 3D objects in the past, present or future from any point in space/time, simultaneously
- Do cyclic polymorphic transformations without point and face limitations
- Fully mouse- and tablet- driven programming with keyboard support - Totally eliminates program control codes
- Supports all ST and TT resolutions
- Outputs to P.I.X.A.R.'s Renderman RIB files

ROSETTA-3D Translator/Viewer - \$89.95

- Translate from one CAD, animation or rendering format into any other support
- Translation file size limited only by mass storage device - not memory size
- Translate entire folders using wildcards
- Import individual objects from within a file
- Quickly create and preview animations with simple "point-and-click" animation
- Unique 3D object marker enables design of animation storyboards in seconds not minutes or hours
- High speed wireframe and depth-cue wireframe modes
- Amazingly fast depth-cue point cloud mode for real time playback of large objects
- Several solid polygon modes - uses revolutionary new polygon drawing algorithm for lightning fast display

CHRONOS Key Frame Animator - \$249.95

- Create stunning and complicated 3D animations without programming a single line of code
- Makes animation as simple as point-and-click... no complicated motion control language
- Point-and-click object, camera and light manipulation provides very intuitive user interface
- Spot lighting and shadow casting functions built in
- Unique ability to cut, copy and paste motion for repeating complex motion sequences
- Data compatible with all Cyber™ series products

PRISM PAINT Drawing Program - \$79.95

- Runs in all ATARI™ resolutions plus 1024X768 4096 color mode
- 24 bit true color mode with 16 million on screen colors
- All the standard paint program functions (circle, box, ellipse, fill, cut, paste, copy, pixel editing etc.)
- Supports the Cal-Comp graphics tablet in four resolutions
- Create animations using the built-in slide show features

PRISM RENDER - \$89.95

- Turns wire frame creations into "photographic" quality images
- Materials editor turns rendered surface into wood, chrome etc.

PRISM TABLET DRIVER - \$49.95

PRISM TABLET w/driver - \$224.95

Dump The 8-Bit

It came as a shock to me that I now have to live with, and pay for, 8-bit stuff in my favorite ST magazine, when I go out of my way to skip all references of 8-bit stuff on the BBS. I call so I won't waste my online time. Now it'll get me at home.

If the 8-bit market is so small that they cannot support their own magazine, then they deserve to be without one. The few months of advertising revenue you'll get from the three or four remaining 8-bit vendors can't be so much as to jeopardize your ST-only readers.

Dennis Conway
Los Angeles, CA

Users of the 8-bit Atari computers are probably staying with their machines for one of the following reasons: they can't afford to buy another computer, or they're perfectly happy with what they have. While there may not be many 8-bit vendors left (there are certainly more than three), there are plenty of users who are important to us. As long as the demand for 8-bit support is there, Antic Publishing, through START, will continue to provide a resource for the classic Atari computer. —START Ed.

Problems With Bombs

Recently, I began having a serious problem when using Desktop Publisher ST. When loading an existing DTP file I experience an intermittent two-bomb crash when the paragraph-styles information loads. If the file does load in OK, printing sometimes causes the program to crash. I booted with a program called ANTIBOMB, and the error messages it gave me were EXCEPTION ERROR or BUS ERROR. All my other programs run without problems. I have erased and reinstalled the program from my master

disks, to no avail. I also installed the program to run from floppy disks, but the problem persists. Is there a way to determine if this is a bug in the program, or is my computer going bad?

Larry Borchelt
Goshen, IN

If the computer crashes only when you use a certain program, then the problem is not with your computer hardware. If the problem has only recently started, then it's not a bug in the program, either. Perhaps a new desk accessory or AUTO-folder program on your hard drive is interfering with Desktop Publisher. Disable these programs until you find the culprit. Also, check all of your floppy disks for a virus. If there is one on your master Desktop Publisher disks, it could be causing your problems. Finally, it's possible that the master disk itself became corrupted (cosmic radiation?), and when you made a backup to your hard drive, the offending byte was passed along. In that case, contact Timeworks to ask about a replacement. —START Ed.

Tracker/ST

Thank you for the very favorable review of Tracker/ST which appeared in your November 1990 issue. I'd like to take a moment to clarify two points made by your reviewer.

First, the current version of Tracker/ST (version 2.03) fixes the mouse clicking problem that occurred with TOS 1.4. All of Tracker/ST's buttons now work with every version of TOS, including the STE TOS and the TT TOS. In July we sent this free upgrade to every registered Tracker/ST owner.

Second, Tracker/ST's mail merge does indeed allow you to insert fields into a letter. All you have to do is place an ampersand before and

after the field name. For example, typing in &CITY& would result in each person's city being printed in the mail merge.

Anyone who has version 2.0 of Tracker/ST should send in their registration card with the serial number filled in, and we will automatically upgrade them to v2.03, free of charge.

CCITT Explained

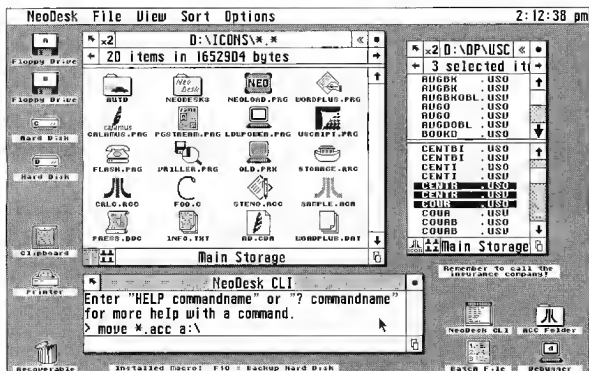

I just finished the telecommunications article by Jerry McBride in the May 1990 issue. I learned a lot from it, but I was left with some questions. The article did not explain some of the modem features listed, like CCITT, MNP Levels 2-5 and External (External what?). Also, the article made a point of telling the readers to buy a modem with a built-in speaker, but then did not tell us if any of the featured products had one.

Carl Wade
Ventura, CA

CCITT means that the modem is compatible with the CCITT standard for 2400-baud modems. CCITT is a European agency, the International Consultative Committee for Telephony and Telegraphy. MNP refers to Microcom Networking Protocol, which is a method for correcting transmission errors caused by line noise. External means that the modem is an external unit (internal modems are installed inside the computer's case). All of the modems mentioned in the article have built-in speakers. —START Ed.

NeoDesk 3TM

The Ultimate Desktop

NeoDesk™ 3 is a complete replacement of the boring, built-in desktop that comes with the Atari ST. Its advanced, yet intuitive, graphical interface will make your computer both easier to use and much more powerful.

It is the easiest and most affordable way to realize your Atari's true potential. Many have called it "the ultimate upgrade for the Atari ST".

NeoDesk introduced the idea of placing your commonly used programs directly on the desktop while pioneering the concept of assigning different custom icons for individual files and folders.

Now NeoDesk 3 takes you a step further, introducing several new and original concepts which will make you want to scream "I want my NeoDesk 3!".

In addition to keeping commonly used files and programs on the desktop, you can now also keep folders on the desktop. And not to limit your creativity, with NeoDesk 3 you can even write *Desktop Notes*™ right on the desktop itself.

Only NeoDesk 3 allows you to look at two different parts of the same window, thanks to its amazing *Split Window* feature. Of course, each window can be set to display text or icons, independently of any other window. Each window can even have its own sorting and text options.

NeoDesk is also smart, using all of its available memory for file copying so that as many files and folders that will fit into memory are read in at once. No more useless disk swaps, even hard drives benefit from its speed and efficiency.

Add some of the other NeoDesk 3 features, such as a brand new Icon Editor, keyboard equivalents, desktop picture, file templates, *Active Icons*, and *Hot Keys* (execute your favorite program with a single key), then you have more than enough reasons to buy NeoDesk. But for those of you who need a little more, read on.

NeoDesk 3 now offers a unique *File Clipboard*™ which lets you temporarily hold files and folders in memory while you are busy doing other things. In a way, you can think of it as an automatically expanding and shrinking ramdisk.

You now also have the power of *Macros*, with which you can automate any series of desktop operations like opening windows, copying files, running programs, etc. These can also have *Hot Keys* assigned to them.

NeoDesk 3 even has special support for 5 1/4" floppy drives and formats all disks with the correct information so they work on most MS-DOS computers.

From low resolution to ultra high resolution, NeoDesk 3 supports up to 10 different resolutions in each system.

Of course, these features would not be useful unless they were easy to use. Rest assured, NeoDesk 3 has been designed to be "upwardly compatible". Use NeoDesk just like you used the original desktop, no need to forget all that you have learned.

It doesn't stop there. The included *Recoverable Trashcan* lets you recover files deleted with it at any time in the future. It was created using the *NeoDesk Developer's Kit*, which opens a whole new world of possibilities. There's also the *NeoDesk CLI* (both available separately), a complete window based command line interpreter which allows you to create pop-up menus, automate file operations, and much more.

No matter who you are, NeoDesk 3 has something for you. From helpful search capabilities to a powerful file reorder function. Thanks to its ability to remove itself from memory, it only needs about 35K of memory. Of course, there's lots more, which you can discover by ordering today!

NeoDesk 3 and the NeoDesk CLI are available from your local dealer, or order toll free by calling (800) 284-GRIB and get FREE 2nd Day Air (US only). Call or write for upgrade and other information.

D. BOHL

Double-Sided Drive

Dato Bose Computer Systems
321 E. 100 South
Manti, UT 84642
(801) 835-8441

Data Base is selling Teac and Toshiba 3.5-inch, double-sided floppy drives as replacements for the ST and Mega. These drives have been modified to be "plug-and-play" units, will step easily to 83 tracks and come with templates and installation instructions.

The Keyboard X-Tender

Diverse Dato Products
P.O. Box 695324
Miami, FL 33269
(305) 651-2393

Unhappy with the present ST keyboard? Plug in the Keyboard X-Tender and hook up an IBM AT-style keyboard to your ST, hassle free — no internal wiring, no soldering, no unscrewing.

"How Computers Work: A Journey Through The Walk-Through Computer"

The Computer Museum
Museum Wharf
300 Congress St.
Boston, MA 02210
(617) 426-2800

An educational videotape that

explains how computers work by taking viewers inside a giant model of a desktop computer is now available. Produced by the Computer Museum in Boston with funding from the Intel Corporation Foundation, the 25-minute video uses the museum's new exhibit, the Giant Walk-Through Computer, to explain graphically and dramatically how computers work.

Special Edition Turbo Out Run

Sego
300 Sand Hill Road
Suite 180
Menlo Park, CA 94025
(415) 854-8290

More power, faster speeds, more choices, more strategy. That's what a brand-new special edition of Turbo Out Run has to offer sports car drivers. Each of 18 cities represents one leg of a tire-screaming, head-to-head race against your key opponent, a Porsche 959.

Neural-Network Construction Set

Apprentice Software
Box 41277
Indianapolis, IN 46241
(317) 297-1552

Neural networks are an emerging artificial-intelligence technology that has been applied in many diverse fields such as image and pattern recognition, regression analysis, sales forecasting and music composition. The Neural-Network Construction Set

is a full-featured neural-network simulator which facilitates the setting up, training and use of feedforward neural networks.

Master 3SD Disk Drive \$189.00

Konyo International Inc.
1073 N. Botavio St.
Suite B
Orange, CA 92667
(714) 633-1026

A new 3.5-inch, double-sided disk drive is available, featuring an LED track display, a cable and a separate power supply. Product comes with a one-year warranty.

Dragon's Lair II: Time Warp call for price

Readysoft Inc.
30 Wertheim Court, Unit 2
Richmond Hill, Ontario

Elie Kenan Leaves Atari U.S. and Canada; Greg Pratt Named Manager

By John Nagy for Z*Net

Atari Corp. confirmed that the widely praised and respected new general manager for Atari U.S., Canada and France has resigned. Elie Kenan, who recently discussed future plans for Atari Corp. with developers at the WAACE and Glendale Atari shows, returned to France where he will continue in his capacity as general manager of Atari France. Greg Pratt, a financial officer at Atari, was named Kenan's successor.

Although the complete reasons for Kenan's departure, after so much public exposure and acclaim, may never be completely known, it is said by those close to the situation that the "official" comment from Atari will eventually be that Kenan found the United States to be too large and too culturally different from the Socialist France he is accustomed to.

However, it is known that after the WAACE show in

early October, Kenan went alone to examine sites in the Boston area. Kenan had commissioned preliminary reports for a possible relocation of Atari U.S. to the Boston area, and speculation is that he found

some sites that he wished to seriously consider. Shortly after returning to Sunnyvale, Kenan met with Jack Tramiel — an old friend and Atari's Chairman of the Board — who hired Kenan to come to Sunnyvale from Atari France. The subject matter of that meeting is unknown, but Kenan then returned to France after some hastily but clearly permanent farewells to Atari employees. It is suspected by some that Kenan's change of heart may have been prompted by some refusal by Tramiel of the control and free hand he had been promised in the reshaping of Atari in the United States.

Shortly after Kenan's de-

parture, Greg Pratt was introduced to ranking employees as the new General Manager for Atari U.S. Pratt is a long-time Atari officer from the finance department who also ran the ill-fated Federated Stores operation near the end of that venture. At one point, Pratt attempted a leveraged buy-out of the troubled Federated Stores from Atari for himself and other investors.

While Pratt is thought by many at Atari to be a competent manager, reaction has been widespread and uniform — shock and fear of what this may mean for Atari Corp. Employees and developers who met with Kenan had high hopes for his plans at Atari.

WAACE Show A Success

from reports by Jerry Cross,
Scott Lapham and other sources

Over 2,000 people flocked to the Washington Area Atari Computer Enthusiast (WAACE) Show at the Sheraton in Reston, Va. October 6 and 7, 1990.

Joppa Computer Products introduced JuST the FAX!. This hardware/software combo sends faxes directly from your computer.

Alpha Systems showed two new products: JamMaster, a powerful digital-sampling synthesizer program, and Walchcart, an inexpen-

sive clock cartridge.

After being dropped by MichTron, HiSoft was on its own, showing Lattice C version 5 and the new Harlekin utilities package.

Two 68030 upgrades were on hand. Gadgets by Small demonstrated a prototype of their upgrade for the Mega (12MB of RAM running at 18MHz). FAST Technologies was also on hand to show their version of a 68030.

Silicoware introduced Slic-

cTop, a Desktop replacement that features multitasking, code swapping, process queuing, unlimited windows, data sharing, code sharing and dynamic memory. The product was not commercially available at press time.

Newcomer Frontier Software demonstrated a cartridge-based clock called Forget-Me-Clock II.

Double Click Software had new versions of both DC Desktop and DC Utilities on hand.

The Atari Corp. booth was busy with STEs on display running demos to show off its colors and sound.

NEWSWIRENEWSWIRENEWSWIRENEWSWIRE

From The Z*Net Newswire

★ A program known as TOS 2 is circulating on private bulletin boards. TOS 2 is apparently an early version of the new TT Desktop which will operate on an ST. While the idea of using it may be attractive, Atari Corp. cautions users that TOS 2 is a pirated file that belongs to Atari, and that it is an early version which is known to be incomplete and unstable. The use of TOS 2 is both illegal and unsafe to your system data.

Atari has stated that they will not release the TT Desktop for existing ST owners, ostensibly to avoid competition with the alternative Desktop developers (in its present form the TT Desktop is reminiscent of Gribnif's NeoDesk).

(According to Atari, the new GEM and TOS is called TOS 030 and will come in chip form for the TT only, although it is expected to be compatible with the STE. If Atari produces an STE-based Mega, as earlier reports indicate, that machine is also expected to feature the new TOS/Desktop, and to share the TT case and hard-drive design. The Mega STE would also be card-compatible with the VME bus of the TT and will

run the 68000 microprocessor at a clock speed of 16 MHz.)

★ A criminal indictment for copyright infringement was handed down against Atari Taiwan Manufacturing Corp. and two employees in October of last year, following a court-ordered search of the company in April that turned up several suspected unauthorized copies of Ashton Tate's dBase III Plus and Lotus Development Corp.'s Lotus 1-2-3. Atari Corp. said the unauthorized copies were used by two employees without the company's knowledge and in violation of stated company policy.

★ Frank Foster, formerly head of Atari's music division, left the company early in September in what is said to have been a mutual

decision reached between him and Atari. His departure leaves Atari with no individual directly in charge of MIDI development and music-industry support.

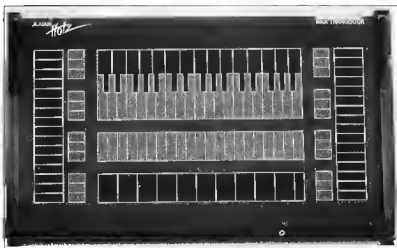

★ Computer Shopper, reputed to be the largest computer magazine in the world, discontinued Atari coverage with the November 1990 issue. Editor-in-Chief Bob Lindstrom said that the decision was made after considerable market and supplier research. He added that Computer Shopper will continue to run major stories covering Atari products when they are warranted.

★ In a half-million dollar chip-piracy bust, Dennis Hayes of Cincinnati pleaded guilty to operating a scheme in which he sold more than 5,000 bogus Macintosh ROM computer chips between 1988 and 1990. Macintosh 128K ROM software information was copied into the chips which Hayes sold for between \$130 and \$195 per set. Hayes was one of several

major chip suppliers for Mac ROMS, also used in Gadgets by Small's Spectre Macintosh emulators for the ST. Though Gadgets does not supply chip sets for their unit, and had no dealings with Hayes, it is known that many Atari users bought chips from Hayes at several Atarifests.

★ Atari Corp.'s long-awaited Hotz Box was scheduled for test marketing in Canada beginning in November. The Hotz Box, brainchild of record producer Jimmy Hotz, is being touted as the "non-musicians answer to making music." The unit will be sent out to a few educational test sites as well as a recording studio in the Vancouver area.

In October, the GENie online service introduced a flat subscription rate of \$4.95 (U.S.) per month including unlimited, non-prime-time access to more than 100 online products and services (not including computer hobby areas). The rate for U.S. access to those GENie services not covered under the flat monthly rate has been set at \$6 per hour during non-prime time for all three access speeds (300, 1200 and 2400 baud). The prime-time rate will remain at \$18 per hour for all three access speeds. The \$29.95 sign-up fee for the GENie service also has been eliminated for all new subscribers effective immediately.

Atari began test marketing the Hotz Box last November.

*Going One Step Beyond
Cyber, Lexicor's Phase-4
System Produces Animation
So Real, You'd Swear They
Used A Movie Camera*

BY GAVIN DOUGHTIE

The Tin Toy rolls across the floor, frantically banging his drum and squeezing his accordion. A towering baby totters after him, gurgling and trailing a long stream of drool. The Tin Toy scoots under the couch, only to find himself in the company of dozens of other frightened toys cowering in the darkness.

Reflected in the Tin Toy's shiny metal head is an image of the living room. The floor is hardwood with a deep grain. The sun streaming through the living room window glints off the crinkled cellophane of the Tin Toy's discarded package. The monster-sized baby's movements are lifelike, his drool especially disgusting. Although everything appears as real as any movie, none of it has been near a camera. The toy and the baby exist only as numbers inside a supercomputer.

Tin Toy was the first computer-animated film to win an Academy Award. The Pixar Corporation pro-

duced it using their line of photo-realistic computer graphics products. Pixar's hardware and software cost tens of thousands of dollars — much too expensive for an individual artist or animator to consider buying for himself. The Atari ST, on the other hand, is within reach of all but the most starving of artists. And now, so is photo-realistic 3D animation.

Picking Up Where Antic Left Off

Although Antic Software's Cyber line of 3D modeling and animation tools gave Atari artists a taste of 3D graphics, producing an animation of any complexity required hours of programming and could only be crudely rendered due to the ST's limited resolution and palette. Furthermore, the ST was an "island" in the 3D world, unable to freely exchange objects and animation files with more powerful computers.

Dissatisfied with these limita-

tions, Emmy Award-winning illustrator Lee Seiler formed Lexicor Software to produce the next generation of 3D animation products for the ST, Mega and TT. Lexicor's Phase-4 family of software lets nontechnical users create animation just as photo-realistic as Tin 'Toy.

In keeping with the Atari philosophy of "Power Without The Price," none of Lexicor's offerings will cost more than a few hundred dollars. In fact, an entire professional system including a TT, a Syquest removable-cartridge hard drive, Lexicor's custom 24-bit color board and all the necessary software will cost around \$6,000 — less than the cost of the software alone for many comparable workstation-based animation systems, and far less than such a system would cost on either a IBM PC or Macintosh.

Seiler sums up the philosophy of the Lexicor system. "It's designed to be used by an individual artist on

desktop hardware. Everything we do is designed for a person who's already an artist, who wants to use a computer because he wants to get into that market. We're not going to teach him how to be an animator; we're not going to teach him how to be a computer operator either. He needs to read the manual, but apart from that he needs to know nothing at all about computers."

Lexicor developer Paul Dana knows a good bit about computers, and he's no stranger to animation; START readers may remember him as the creator of the Cyber Stars desk accessory and the spectacular Fly By Night animation he and Robert Mills created with it. Dana explains why Lexicor chose Atari.

"We figured the ST was the very best computer to do animation on. The hardware on the Amiga may be better but the operating system's from hell. The PC has absolutely no consistency in hardware and you ►

have about this much RAM to work with [he holds his fingers an inch apart] and I personally can't afford a Mac II. Most people are probably in the same financial situation I'm in. Also, the throughput on an Atari is just amazing — there are no wait states anywhere and it pumps graphics out at ridiculously high speeds."

Dana is writing the Chronos animation program; Atari 3D veterans such as Mark Kimhall and David Ramsden are working on other applications in the Phase-4 series. In its present form, Phase-4 connects the Atari 3D "island" to the mainland through four inter-related graphics applications and two hardware products for the ST, Mega and TT. The software products are Rosetta-3D, Chronos, Prism Render and Prism Paint.

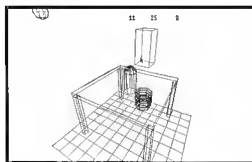

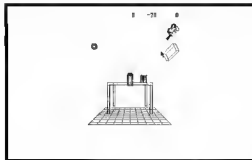

Rosetta-3D

Just as the original Rosetta Stone was the key to translating Egyptian hieroglyphics, Rosetta-3D acts as a universal translator for 3D objects. It not only reads and writes object files created with CAD-3D or Cyber Sculpt, but also models created in most of the popular Macintosh, Amiga and PC-based 3D programs. Using Rosetta-3D, an object created on a Macintosh can be translated to Cyber Sculpt format, manipulated in that program on an ST, then exported as a .DXF file for use in AutoCad on a PC.

In addition, Rosetta can perform simple object manipulations in wireframe or point-cloud mode for maximum speed. Draft animation can be created a frame at a time in a manner similar to CAD-3D 2.0 without Cyber Control. Creating really serious sequences, however, requires Chronos, Lexicon's key-frame animator.

Chronos

In traditional cartoon animation, a

"key" animator draws only those frames necessary to describe a character's action. For example, if an animation sequence calls for Bugs Bunny to jump into his rabbit hole, the key animator draws a picture of Bugs crouched to leap, another picture of him in midair and perhaps another of him diving head-first into the hole. Then another, less experienced (and less expensive) animator draws all the intervening frames required to make Bugs' action seem smooth and fluid, a process known as tweening. In a key-frame animation system on a computer, the animator sets up the key frames of a sequence and the computer does the tedious job of tweening.

To demonstrate Chronos, Seiler creates an animation of a spaceship flying into a black hole, with the camera following on its own path. A nightmare to program in the old Cyber Control system, Seiler does it from scratch in two minutes using Chronos. Working in wireframe mode, he drags his spaceship model to a point high above his black-hole model. A wireframe box indicating the spaceship's object boundaries moves in real-time to indicate changes of perspective and orientation. He drags the built-in camera model to the other edge of the ST's monitor, points it at the spaceship and sets this as the starting frame of

the sequence. He drags both models to new positions, rotates the spaceship model slightly to give it a banking motion, then sets another key frame. He repeats the process three or four more times, until the ship and camera are both at the bottom of the black hole. After telling the animation program how many frames are to come between each of the key frames, he instructs the computer to generate the scene in wireframe. In a few minutes, the machine has written a stunning 80-frame sequence to the hard disk.

In addition to moving objects around, Chronos can perform several different types of metamorphic animation. A sphere could transmogrify into a mermaid and back again, with Chronos computing the intervening objects.

Chronos also uses a simple yet extremely powerful technique known as cycling. To make a bird fly using cycling, the animator would first sculpt several different versions of the same bird, each with its wings in a different position. Let's say it takes 12 different models to smoothly show the wings flapping up and down. As before, the animator defines a path for the bird to fly along and sets key frames. The animator also tells Chronos that the bird is a cycled object; in each successive frame the next bird is used. When the twelfth bird is used, the cycle returns to the first bird model. Any number of objects in a scene can be cycled, at different rates, and each cycled object can include another cycled object (a bee buzzing around the bird's head, for instance).

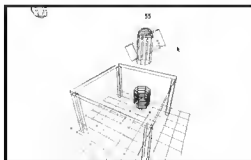

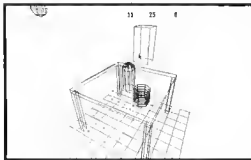

Chronos renders sequences in more modes than CAD-3D: wireframe, wireframe with depth-cue (distant parts of the object are rendered with darker lines), hidden face, solid face, Gouraud shaded (smooth) and Phong shaded (smooth shading with highlights). While good-looking images can be pro- ▶

duced with Chronos alone, truly realistic animation requires the Prism rendering package.

Prism Render

Rendering, the process of actually computing how each pixel on the screen will look for a given frame, is the most time-consuming and crucial part of creating realistic-looking 3D animation. Sophisticated rendering can turn a crude wireframe sphere into a delicious-looking orange, complete with tiny bumps and "Sunkist" label.

Lexicor's Prism Render takes files created in Chronos and renders them as realistically as possible. Objects can be made to look like chrome, glass, wood and a variety of other substances. Light sources can be refined to behave like the sun, room lamps, or colored spotlights. Even the atmosphere in a

scene can be made hazy. Prism will work in all Atari resolutions: 16 colors on an ST, 256 colors on a TT or 16 million colors on any Atari equipped with a 24-bit color board.

Prism Paint

Since an animation sequence often

requires tweaking after the animation has been rendered, Lexicor has created Prism Paint, a full-featured painting program that can also be used for frame-by-frame animation, much like Cyber Paint. Prism Paint can also use the same hardware as Prism Render for painting in millions of colors.

RenderMan Compatibility

Though Prism renders quite capably on STs equipped with a 24-bit graphics card, Lexicor's software can also export animation files in Pixar's RenderMan Interface Bytestream (RIB) format. These text-only files function for 3D animation much as PostScript does in the 2D world, providing a standardized way to describe a 3D scene, including light sources, object motion and what materials the objects are made of. These files can

be transferred to PCs, workstations or even supercomputers running Pixar's rendering software. With Lexicor's hardware add-ons, it may not even be necessary to go that far.

Hardware

To faithfully reproduce the many subtle variations in shade and color seen in the real world, photo-realistic computer graphics require a virtually unlimited number of colors on screen. Neither the ST's 4-bit (16-color) limit nor the TT's 8-bit (256-color) limit come close, so Lexicor is making a graphics card that will let Atari computers display 24-bit color (up to 16 million colors simultaneously.) Prism Render and Prism Paint will be able to take advantage of the hardware immediately, and since the card plugs into the cartridge port, it can be used with any ST, Mega or TT.

Lexicor is also creating a genlock/image-capture board to output images to videotape. Not only will this board let animation be recorded to videotape, it will also provide a means to bring an image from video into the Atari for manipulation. The board can output images in American NTSC, European PAL, or RGB "stream" format, over-scanned and with sufficient simultaneous colors for realistic images. With the genlock feature, images can also be overlaid or "keyed" on to existing video images. Like the 24-bit color board, the genlock/image-capture board also plugs into the cartridge port of any Atari. The video board includes an expansion port for future products, such as a single-frame controller for videotape decks.

Setting Standards

"We [Lexicor] are setting new standards for Atari," says Seiler. "We're setting new file-format standards, new application standards and we will be putting the Atari user into

true photo-realistic animation. Our developers have created stuff for the Atari that no one's ever seen, that you could never imagine possible."

(Editors's Note: See a Phase-4 animation sequence. Open the DEMO folder on your START disk, then open the LEXICOR folder. Double-click on Player.PRQ.)

Gavin Doughtie writes and directs for CU Productions in Hollywood,

Calif. He conducted the Darrel Anderson interview in the November 1990 issue of START.

Beginning Grammar

Your Computer Tutor

BY JONATHAN GRAEHL

Do you remember how much "fun" grammar class was? Well, for me it was about as exciting as watching paint dry or linoleum curl, and I'm sure that many of my fellow students felt the same way. But these days, with the advent of Computer Aided Instruction (CAI), the doldrums of grammar class can be eliminated. Beginning Grammar brings this technology to students through your ST.

Starting Grammar

The file GRAMMAR.PRG on your START disk is a self-extracting archive of Beginning Grammar. To un-ARC the program, double-click on GRAMMAR.PRG, choose Extract, then choose a destination disk from the item selector that appears. The program file GRAMMAR.PRG will be written to that disk. Double-click on GRAMMAR.PRG, and the program will start. You'll see the opening screen, then you'll be asked to press a mouse button to continue on to the main menu.

Pick A Quiz, Any Quiz

Once you're at the Main Menu, you have several options. You can go to one of the grammar quizzes, turn the music on or off (toggle), view the credits, get help, or quit. The sound toggle button is located at the lower left-hand corner of the screen, and the credits/help button is just to its right.

Traveling With Nouns

In this quiz you're asked to classify a word as a person, place, thing, or

not a noun. This can be accomplished by clicking with the mouse on the box of your choice. Correct answers are rewarded with a green traffic light and music. Of course, if you've turned the music off, you won't hear it, but you will get a flashing screen. If you give a wrong answer, the correct box flashes off and on. Your score is indicated by a vertical bar in the upper left-hand corner of the display.

Hide And Seek With Verbs

The object of this exercise is to click on the box with the verb in it. Should you make the right choice, you'll hear some happy music and increase your score. The wrong answer gets you some musical punishment while the correct answer flashes on and off. Your success with verbs is represented by the number of "tags" you earn.

Dining With Adjectives

Which word on the menu is an adjective? If you think you know, click on it. Correct answers are rewarded with the famous flashing screen or music, but wrong answers are indicated by a blinking underline under the correct answer. Your score is shown on the cash-register box in the upper left-hand corner.

Pick A Door With Adverbs

This quiz may resemble the infamous shell game, but if you can rec-

ognize an adverb, you've got a sure win. Select the door that contains the adverb. Correct answers will be rewarded as usual. Your score is shown in a box at the center of the bar at the bottom of the screen.

Pitching With Pronouns

The pronoun quiz puts you out on a baseball field. Here, you must locate the field position that contains a pronoun. A correct answer gives the batter a strike. An announcer (box in the upper right-hand corner) indicates the success of your attempts. Your score is indicated by the number of strikeouts.

In Conclusion (Introductory Phrase)

If you have an STE, or have upgraded your ST to TOS 1.4, you can make it easier for kids to use Beginning Grammar by making it auto-start. To do this, put GRAMMAR.PRG on a disk by itself, then click on its icon once so that it is highlighted (make sure you're in low resolution). Then go to the Options menu and choose Install Application. Click on the Auto button, then click on Install. When you get back to the Desktop, go back to the Options menu and choose Save Desktop. After the computer writes a DESKTOP.INF file to your disk, write-protect the disk, then show your child how to put the disk in your A: drive and turn on the computer. You will find that GRAMMAR.PRG starts automatically every time this disk is booted!

AT A GLANCE

Program:	Beginning Grammar
Type:	Educational
Requirements:	512K, low rez
Archive:	GRAMMAR.PRG
File:	GRAMMAR.PRG

Is the word in the suitcase a noun? Click on the box that describes the word.

Jonathan Graehl is a student by day and a programmer by night. He enjoys making life miserable for his parents. This is his first program for START.

CYBORG AT THE CONSOLE

An Automated Mixing Overview

BY
**PAUL M.
KEEFE**
AND
**JIM
PIERSON-
PERRY**

Music/MIDI Editor

It's 4 a.m. and you want to die. You've spent the last 12 hours mixing the one song that will launch your career — and it's sounding worse and worse by the minute. If only you had captured that great mix you did at 8 o'clock last night! Well, don't just sit there feeling sorry for yourself. Apply a little prevention at your next keyboard session. Put your ST to work for you: Automate the mixing process. With automated mixing, you can keep as many takes as you want, plus have the freedom to experiment for more creative effects.

MIDI mixers range from sequencer software to hardware MIDI controllers to fully automated consoles. The type you need depends on your budget and intended use.

Software Mixings

If you only use MIDI tracks in your songs (synthesizers, drum machines, etc., with no taped acoustic instruments), forget specialized hardware. All you need to be able to do is record, edit and play back continuous-controller messages — part of virtually all sequencer programs. You can mix the volume levels of the individual tracks in

your song, changing them on the fly as often as needed to achieve the perfect balance. This assumes your instruments respond to MIDI volume commands (continuous controller #7 in the MIDI definition), common in today's gear, but missing in some older pieces like the Casio CZ-101. If you can't change the volume through software, you'll need a hardware mixer.

Sequencers offer three approaches to controller editing: text, graphic and real-time. Most sequencer packages offer all three. Text editing works best to set starting volumes, step changes at defined times, or mute instruments. Creating fade-in/fade-out effects or altering the mix during the song is easiest with graphical editing. This can be done dynamically while the music plays, or any time afterward.

Different sequencers afford different degrees of editing sophistication. The MIDI-Track ST series provides control of a single MIDI channel at a time. You can choose or change the editing channel at will and, while replaying your sequenced song, move the screen fader with the mouse to change the volume. Cubase lets you do this

with up to eight real-time screen faders; you get the full 16 MIDI channels with Creator/Notator.

For best results with real-time mixing, your sequencer should "chase controllers" on the playback. This means if you start from any point other than the beginning, the sequencer searches for the last controller setting (if any) and applies it before playback begins. Otherwise, you may miss earlier changes and find gross inconsistencies in the final mix.

One trick is to set volumes to zero on a channel when its respective instrument isn't playing. This cuts down on background noise. Just remember to pop the volume back up a beat or two before the instrument kicks in again.

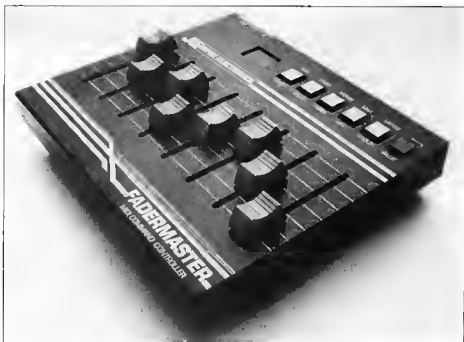

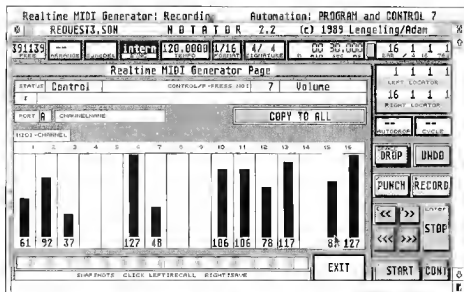

Hardware Controllers

What if your sequencer doesn't implement controller editing, or you prefer the feel of a real fader over a mouse? No problem. There are inexpensive hardware devices you can insert into the MIDI data stream to send out controller information. The basic design of these units is the same. To generate data for a specific controller on a specific MIDI channel, just assign it a knob, slider or other physical control.

The simplest of these — the Yamaha MCS2 (no longer in production) — controls a single channel. You can use a slider, foot controller or even breath controller to generate the MIDI volume data. This goes into your sequencer and is directly incorporated into the song. You can have individual sequencer tracks that contain nothing but MIDI volume data — each one a different mix experiment.

Moving up the ladder is the MRC (MIDI Remote Control) from Lexicon. It provides four assignable faders for real-time control.

The top of the class is J.L. Cooper's FaderMaster, with eight fully-assignable faders to transmit any and all controller commands. Aptly described as the "Swiss army knife" of MIDI, it is easily configured to send volume controls, patch changes,

note on/off, sysex commands or virtually anything else in the MIDI definition. It can follow and display incoming volume data from a sequence versus your current fader settings, so you can match them before making any change. Beyond mixing applications, it's incredibly handy for communicating with modern synths and signal-processing gear that lacks adequate front-panel controls. J.L. Cooper even offers editing software for the ST to simplify programming the FaderMaster.

VCA-Based Mixing

To deal with both MIDI and taped tracks you need some form of MIDI-controlled mixing board. Either of two options re- ▶

Top: Use Notator's Realtime MIDI Generator as a software 16-channel mixer. Changes made with the mouse are captured in real time. Blank channels have MIDI volume set to zero.

Bottom: FaderMaster, from J.L. Cooper, is the "Swiss army knife" of MIDI technology.

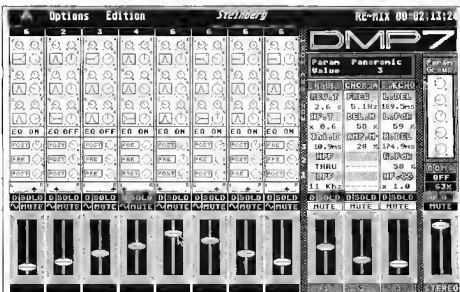

sponds to MIDI: the mixing board itself, or an intermediate device in the audio chain. We'll begin with the latter.

In general, intermediate devices are called VCAs — Voltage Controlled Amplifiers. Audio outputs from synths and tape decks feed into the VCAs and are attenuated in response to MIDI controls.

Subsequent output feeds into your mixing board, where the faders should be left untouched and wide open (the balancing is already done). The best known of these VCA boxes are the JBL/Urei Twister Pac, Iota MIDI-Fader and J.L. Cooper MixMate. All provide eight input audio channels, with each usually controlled by a separate MIDI channel.

The Twister Pac is a single-space rack-mount unit. It can take snapshots of the relative VCA settings and store them in 99 memory locations. Snapshot mixing leaves a lot to be desired, compared to dynamic control. About the best use for it is to save favorite reverb and effects settings for instant recall. Twister also offers real-time control via a front-panel knob or eight on-screen faders under dedicated software control. The front-panel knob lets you adjust the audio level one channel at a time and save it to your sequencer (mixing a song one channel at a time is tedious at best and not recommended). The software faders are great for real-time control — except that if your computer is already playing a sequence, you need a second ST to control Twister. Right now, Twister is overpriced (\$1,750) for only doing snapshots.

The Midi-Fader is also a snapshot mixer, but much more reasonably

Typical main screen from the Desktop Mixing DMP7 program by Steinberg/Jones. Click an individual graphics to call up numerous secondary editing and control functions.

priced. Combine it with a FaderMaster and you have a full, MIDI-controlled, automated mixer for about \$800. Each MIDI-Fader channel has a solo and mute setting. A har graph in the LCD window shows the approximate attenuation for all eight channels. You can save its 128 snapshot settings as sysex data into your sequencer or librarian software, something Twister can't do.

MixMate is a different breed. This little machine (similar in design to the FaderMaster) performs all of the above functions, includes a built-in sequencer and can sync to SMPTE and other time codes.

SMPTE stands for the Society of Motion Picture and Television Engineers and is the time-code standard of video and film industries. (*Editor's Note:* See "What Is SMPTE" in the November 1990 issue of *START*.) It is also the preferred timing base for most professional and many home-recording studios.

If your sequencer can generate SMPTE, you can easily lock MixMate into it. If not, MixMate can generate its own SMPTE time code, place it on your multitrack tape and send MIDI time code to lock into your sequencer. Rather than simply write controller data into your sequenced song, MixMate takes over as the

brains of your system. It controls fader moves from its internal memory, synced to your tape deck, and acts as the timing base for your sequencer.

Then there's MixMate Plus, ancillary software to MixMate. It increases MixMate's onboard sequencer memory from 4,400 events to 44,000 — more than enough memory for most applications. A screen mixer shows current fader settings and SMPTE time.

You can't change mutes or move the faders with the mouse. Recorded fader settings in the current sequence memory are shown as solid white faders, while phantom faders depict the actual fader positions on the MixMates.

The newest member of the VCA group is the Audio Control Module from Steinberg/Jones. It's like the VCA devices but uses different electronics for a cleaner and quieter audio output, according to the manufacturer. It provides eight individual inputs and outputs, along with a stereo mix. The faders may be controlled by software such as Cubase. For a given MIDI channel, eight faders are governed by sequential continuous controllers (e.g., 13 through 19). This protocol allows up to 16 modules to be controlled simultaneously (one per MIDI channel) for a maximum of 128 faders.

Pro Solutions

VCA mixing is also popular in professional recording studios. Two major players are Mimix from Steinberg/Jones and MAGI II from the ubiquitous J.L. Cooper. Both can be configured to work with virtually any studio mixing console and synced with SMPTE or MIDI time code. MAGI II internally generates ▶

These Boots Are Made For Workin'!

And that's just what they'll do.... Put START disks (with magazine) to work NOW!

Get 12 issues of START and 12 program-packed disks (averaging 6 commercial-quality programs per disk)

For just \$79.95!

Applications

The mover and shaker, the ST achiever, will discover an array of practical programs. From database to financial planners, this binary line-up boosts more than just a graphic.

Amusement

Escape the hassle and frazzle of the work-a-day world with sizzling START games! Every issue includes at least one from the myriad of genres - RPGs, Shoot 'Em Ups, Arcade Adventures, even word puzzles - to tickle your imagination and untangle your nerves.

Art

Musicians, artists and writers can explore a new medium through MIDI, CAD and word-processing programs - creative tools for uninhibited freedom of expression.

And...

START magazine, of course, North America's number one guide to the Atari ST! Page after page of hot ink, START features software and hardware reviews and new product info, graphics, MIDI and games columns, application hints and tips, Atari news and more information you won't want to miss!

W/Regular Purchase

MAPS & LEGENDS - (STO202) Accurately plot Earth land masses using one of eleven map perspectives. Design your own maps, or use DATAMAPS overlays. (\$34.95)

DISK DOCTOR - (ST0211) One small error and your disk is damaged? No more. Repair damaged disks with ease. Also allows you to edit your disks. (\$24.95)

CAD-3D 1.0 - (ST0214) The original computer graphics program for the ST, contains many of the features of Cad-2.0 for only \$12K. (\$29.95)

STAR STRUCK - (ST0222) Follow your lucky stars with this program that instantly creates charts using formulas for the nine most popular historical house systems (\$19.95)

3D FONTS I - (ST0224) Design your own 3D greeting cards, signs, logos, and letterheads with over 250K of serif and sans-serif letters (\$29.95)

3D PLOTTER AND PRINTER DRIVER - (ST0225) Supports HP pen plotters (and compatibles) plus screen dump drivers for Okidata, IBM, NEC, Epson, many more (\$24.95)

KERMIT & REMOTE CONTROL - (ST0226) Instant Kermit protocol within Flash with this custom desk accessory. Remote control turns Flash into a mini-BBS. (\$24.95)

DATAMAPS I - (ST0227) BOUNDARIES OF THE WORLD overlays for Maps and Legends. All of the major countries plus bonus historical maps. (\$24.95)

G.I. SOUND TOOL - (ST0233) Save time, money, and frustration by creating your own sounds fast and easily through a GEM-easy interface. Sound library incl. (\$19.95)

GENESIS - (ST0239) The 3D Molecular Modeler - Create the basic elements, load and display amino acids, hydrocarbons, create your own molecules, much more. (\$69.95)

3D DEVELOPER'S DISK - (ST0244) You can use this program (and a working knowledge of C) to unlock the deepest secrets of CYBER STUDIO. (\$29.95)

THE NAVIGATOR - (ST0245) Pilots, navigators - both ocean and air - can use this amazing program to create accurate, detailed flight and sailing plans. (\$49.95)

BASE TWO - (ST0246) GEM based data based program that is a powerful and easy to use way to organize. Too many features to list. (\$59.95)

QUICKTRAN - (ST0247) Your 1200-baud modem can now transfer files at over 2000 baud, 2400 baud now flies at 4000 baud. And it's totally legal. (\$34.95)

SPECTRUM 512 - With this one program you can give your Atari ST a palette of 512 colors, and a simulated palette of over 24,000 colors. Easy to use. (\$69.95)

3D FONTS II - (ST0254) Spectacular new fonts plus a potpourri of 3D clip art. Also includes face masks, corner pieces, stars, etc. (\$29.95)

CARTOON DESIGN DISK - (ST0256) With this program you get not only a collection of 3D comic characters, but specially designed programs to animate them. (\$29.95)

DATA MAPS II - (ST0258) The world's rivers, great highway, Great Wall, Alaskan Pipeline, Trans Siberian Railroad, and The Orient Express. (\$24.95)

SHADOW - (ST0259) Run any program while downloading or uploading through any GEM terminal program with this transparent background file. (\$29.95)

MACROMOUSE - (ST0260) Use this program to record all button clicks and keyboard presses you use to create a sequence, then ask it to re-create them in real time. (\$34.95)

VIDEO TITLING DESIGN - (ST0261) Add that professional touch to your videos with spectacular animated titles. Lots of effects and fonts. (\$29.95)

GAMES, GAMES and MORE GAMES

SHOOT THE MOON - (ST0252) A colorful, high-speed shoot 'em up in the classic arcade tradition - with fabulous animation, and original sounds. (\$19.95)

3-D BREAK-THRU - (ST0 253) Bang away at the walls of this labyrinth in Stereo with this first rate game of point-of-view handball. (\$19.95)

ALL ABOARD - (ST0402) Return to the days when the best toy imaginable was a train set for you to set up and run. Fun for all age! (\$24.95)

STARQUAKE - (ST0403) Try to repair the fabric of our universe while fighting the many unknown and dangerous creatures of this unstable planet. (\$29.95)

FOUNDATIONS WASTE - (TH5001) - Join agent Einholts through a possible loophole to the Galaxy Perimeter and escape the horror of The Waste. (\$29.95)

PHANTASM - (TH5011) - Phantasize to keep ahead of the POLL TAX collector, and be whisked away to a future you could never dream! (\$29.95)

HYPERDOME - (TH5021) - Sit at the controls of a federation fighter and take on the final test of a pilot's skills - for glory or for death. (\$29.95)

I LUDICRUS - (TH5031) - Join our little hero as he fights the worst bad guys the Romans could come up with. Our teckies love this one! (\$29.95)

SPACE SCHOOL - (TH5041) - A rookie pilot has melted most of 61 Cynus, and the Academy has come up with a new, horrifying Final for the elite corps. (\$29.95)

TRANSPUTOR - (TH5051) - Enter the computer of your dreams and work through the 32 screens and 32 enemy blocks - 3D action, digitized sound. (\$29.95)

BLACK SHADOW - (TH5061) - Infiltrate the Asteroid 'BLACKSHADOW', annihilate the 'deadly rock', and bring life back to the slowly dying Earth. (\$29.95)

Mail Order: To order by mail, complete order form and return with payment to:

time code; Mimix needs a separate interface unit such as the SMP-24. The same setup applies here as with the MixMate — your sequencer becomes a slave to the mixing unit, in turn synced with a tape deck.

Mimix can run as a stand-alone application or share a single ST with other programs (e.g., Cubase) under Steinberg/Jones' M-ROS multitasking system, which comes bundled with selected Steinberg/Jones software. It uses a sophisticated graphics interface to display and control audio signals for individual groups, effects reruns, and master output. A cue-list scheme manages mixing changes and can trigger any type of MIDI event. Each channel also has a programmable noise gate for enhanced control of audio dynamics.

MAGI II is similar to Mimix and handles from 16 to 64 channels. It can take on the entire mixing job, from generating SMPTE code to controlling your sequencer. A remote unit, similar to an expanded FaderMaster with 16 individual and four group-assignable faders and mutes, controls the mix — just like riding an actual console. Alternatively, you can retrofit MAGI II into almost any console to work directly from your existing faders. Other software features include the ability to generate MIDI events at any point in the cue list and "off-line" editing of a mix without tying up the console.

Another approach to professional mixing is to use a mixing board that directly responds to MIDI control, without any intermediate devices. Choices here run from mem-

orized mute settings to full control of all parameters — you get what you pay for. For starters, the Tascam MM-1, a 20-channel rack-mount unit designed especially for synths, stores snapshots of the mute settings in its internal memory. You can send a MIDI-program change command to the MM-1, either manually or embedded in a sequence, to restore the associated mute settings.

At the top end, in both flexibility and price, is the Yamaha DMP7, a digital eight-channel console with complete MIDI implementation. It digitizes incoming audio at a 44.1KHz sampling rate with 16-bit resolution (CD quality) and can directly read/write to DAT (digital audio tape) for professional mixes at a reasonable cost. All mixer functions are controllable via MIDI commands, including level, pan, parametric equalization, mute and solo switching. The faders even move automatically to track your mixing program on the playback. Built-in signal processing effects, from delay lines to reverbs, occur in the digital realm to keep your work noise free.

For facile operation, Steinberg/Jones has teamed up with Yamaha Europe to release the Desktop Mix-

ing DMP7 software package. It controls up to four DMP7s at a time, with full graphic control of mixer functions and cue-list event triggering (optional SMPTE sync via the SMP-24 interface). Advanced functions let you perform audio-processing tricks such as ganging parameters across different channels to respond to a single group fader.

The newest member of the Yamaha mixer family is the DMP11, a rack-mount, eight-channel, younger brother of the DMP7. It offers more memory locations to save its settings and additional signal-processing effects, but less parametric equalizing and only two effects sends and no automated faders.

Final Mixdown

MIDI mixing is here to stay. But before you run out for an automated console, evaluate your needs. It makes little sense to buy new gear if your present sequencer can get the job done. On the other hand, if you've been thinking of cloning extra hands to run more faders, start looking at automated solutions.

Part-time musician Paul Keefe lives in Manchester, N.H.

HIDE- O- RAMA

The Desktop Clutter Killer

BY
GREG
"MADDOG"
KNAUSS

My hard disk was crowded, packed with various odds and ends. I have a spell checker with six independent dictionaries. There's a game with almost a hundred separate sound and picture files. My desktop publisher uses a dozen or so .HLP, .OVL and .RSC files. In short, my Desktop was a mess. Though each program has its own folder, I often needed to search through the contents of a window just to find the executable file. I couldn't delete these things — each program needed them, yet they were getting in my way.

Clearly I had to find a way to prevent a file from appearing in a Desktop window or a file selector, yet still be visible to the program that needed it. I needed Hide-O-Rama. Hide-O-Rama will let you move through each disk drive in your system, into and out of each folder, and mark files to hide. A "hidden" file won't appear on the Desktop or in file selectors, yet when a program tries to access it, it will work as normal. Additionally, Hide-O-Rama will let you toggle a file's write protection, which will prevent that file from accidentally being erased.

How To Use Hide-O-Rama

You'll find all the Hide-O-Rama files in the HIDORAMA folder on your START disk. For you programmers, HIDORAMA.GFA is the source code and HIDORAMA.DFN is the definition file for the resource. For those who just want to use Hide-O-Rama, copy HIDORAMA.PRG and HIDORAMA.RSC into the same folder.

When you first run Hide-O-Rama, the root folder of the current drive will

he displayed. The arrow buttons on the right side of the screen can be used to scroll up and down through the list. To hide a file, simply click on the filename to highlight it, then click on the Hidden or System boxes at the top of the screen. (Hidden and System are two different ways to achieve the same result, each with its own foibles, listed below.) Your choice will be highlighted, the drive will be accessed, and H or S will appear to the right of the filename. If you were to quit Hide-O-Rama at this point, that file would not be visible from the Desktop or standard file selector. Additionally, if you click on Protected, you'll set the file's write-protect status (which is also alterable from the Show Info menu item of the Desktop). A P appears next to a protected file.

How Hide-O-Rama Works

When Hide-O-Rama "hides" a file, it actually sets either the hidden or system bit in the file's attribute byte. According to what this byte says, a file can be made write protected, marked as a folder, or any of a number of options. Neither a hidden nor system file is displayed to the user, but most programs can access them as normal.

However, some programs can't seem to find some hidden files. My spell checker, for instance, won't work correctly if its configuration file is hidden — it says that it doesn't exist. Though hiding files for most applications isn't a problem, if a program suddenly stops working, try either using the other hide bit — uncheck Hidden and use System or vice versa — or sim-

ply unhide the program's more important data files.

Though the hidden and system bits generally achieve the same thing, there are a few differences between them. For instance, you can-

tributes, they can be changed with a GEMDOS(67) call, an explanation of which is in the GFA BASIC 3.0 manual.

What Not To Hide

While Hide-O-Rama was intended to hide files that programs need and users don't, it can just as easily hide anything else and you should take care not to go merrily hiding everything on your system. You probably shouldn't hide executable files (.PRG, .TOS, etc.) because then you won't be able to run them from the Desktop, and hiding things like word-processor files would mean that they would be inaccessible from the standard file selector.

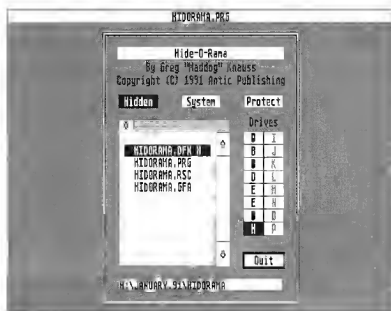

And At No Extra Cost . . .

If you program in GFA BASIC 3.0 and are interested in a way to get information about files in a directory — their date, size, attributes or anything else — look at the subroutine `get_dir` in the HIDORAMA.GFA code. It demonstrates use of `FSFIRST()`, `FSNEXT()` and the Disk Transfer Address (the area in memory where file information is returned), all of which are handy if you are doing any file manipulation.

The End

Hide-O-Rama, in short, works. I've only run it once — ideally that's all I'll need to — and yet it's saved me both time and frustration each time I've used my ST. I hope it does the same for you.

In addition to spending far too much time on his computer, Greg "Maddog" Knauss is editor of the University of California at San Diego's Erratically and occasionally attends class.

Using Hide-O-Rama is easy. Simply click on the filename, then click on Hidden or System to hide it.

not hide resource (.RSC) files because the system will be unable to find them — for some reason, the system's resource loader ignores files that are hidden but not those that are systemed. But in general, try hiding a file before systeming it, if only because System was designed for use by the system's support files (my hard disk's boot program is the one example that happened "naturally" on my computer) and Hidden was meant for more general uses.

If you're curious about file at-

HURRY!

*Simple Isn't
Always
Easy*

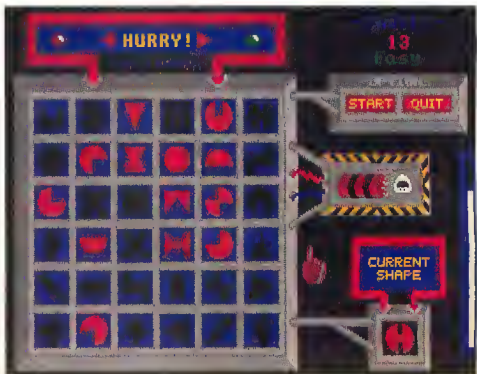

BY J PEACH

J Peach (yes, his first name is J) presents one of the most frustrating and addictive games ever published in START. Strange, it all looks so easy . . .

Hurry! is a puzzle game which requires fast reaction time and some pretty good hand/eye coordination. You must race against the clock, placing all kinds of shapes into their matching slots in order to defuse a timebomb (how's that for originality?). If all 36 shapes are placed in their matching slots before time runs out, the connections will be severed, and you'll be the hero of the day. However, if you can't take the pressure and become too jittery, it's curtains for ya'. If you think you have what it takes to become a hero (and you know that you do), then read on.

Hurry Up And Get Ready

First, you need a color monitor hooked up to your ST. ►

OPERATION: FIREFIGHT™

RISE TO THE CHALLENGE

You're a war-hardened F-16 fighter pilot supplementing ground forces in an enemy-infested hot spot. Your mission: annihilate enemy tanks, trucks, MiGs, Hinds, pontoon bridges, and supply lines—fast!

12 NEW MISSIONS

These new heart-pounding missions are

FALCON MISSION DISK II
ORIGINAL FALCON™ PROGRAM REQUIRED
TO RUN FALCON MISSION DISKS.

guaranteed to test the skill of even the most seasoned Falcon pilot.

Wield new weapons and equipment. Air-to-air radar-guided missiles, high-speed anti-radiation missiles, and radar jammers. Achieve tank superiority, and you'll earn the Medal of Honor.

Operation: Firefight.
The challenge continues...

**Lock missiles and fire.
Moverick turns enemy
tank into instant scrap.**

**Down oncoming Hind
'copters before they
destroy your tank platoon.**

Spectrum HoloByte™

A Division of Sphere, Inc.
2061 Challenger Drive, Alameda, CA 94501, (415) 522-0107

Actual screens shown. Operation: Counterstrike © 1989, Operation: Firefight © 1990 SPHERE, INC.
Falcon, Falcon Mission Disk, Falcon Mission Disk II, Operation: Counterstrike, Operation: Firefight, and
Spectrum HoloByte are trademarks of Sphere, Inc. Other products are trademarks of their respective holders.

AVAILABLE FOR AMIGA® AND ATARI® ST™

(Editor's note: Hurry! is not compatible with the STE.) Then, you need to run the self-extracting ARC file HURRYARC.PRG on your START disk (read the disk instructions). When you're through with that, double-click on HURRY.PRG. You'll see the title screen, and a scrolling message with information about the game. Simply press the key [1] for Easy, [2] for Normal or [3] for Hard to select the difficulty level. Now you're at the game screen.

Click on START to begin your game, or QUIT to return to the Desktop. If you choose START, the mouse pointer will automatically move down to the CURRENT SHAPE window. You're then prompted with 'READY!'; and then 'GO!'. Quickly click on the current shape, place it over the matching slot, and click the mouse button again. Once this is done, return to the CURRENT SHAPE window and

repeat the process. Meanwhile, the time bar, located at the right side of the screen, will progressively work its way upwards. Once it reaches the top, time's up and the bomb explodes. If you're able to place all 36 shapes correctly before time runs out, a new randomly-generated game board will appear and the chaos starts all over again.

Scoring is determined by the number of properly placed shapes; if you place 10 shapes in their matching slots before time runs out, your score will be 10. The score is located at the upper right corner of the game screen.

AT A GLANCE

Program:	Hurry!
Type:	Game
Requirements:	512K, low or medium rez, TOS 1.0-1.4
Archive:	HURRYARC.PRG
Files:	HURRY.PRG

Take A Hint

The object of Hurry! may seem simplistic, but the execution is not. I recommend setting the difficulty level to Easy for first-time players. Soon, your reaction time will increase and you'll be able to locate the matching slots much faster. Level 3 (Hard) should prove challenging (but not impossible) for all players. Here are some more tips.

The game screen will flash when time has run low (10 seconds before detonation). Try not to scare yourself when you see that. Concentrate!

To place a shape into its proper slot, you need not put the shape exactly over the slot. As long as the center of the shape (the "hot spot") is in the box surrounding the matching slot, the shape will be placed where it belongs.

If you wish to change the difficulty level at the game screen, you can press [1], [2], or [3] on your keyboard. The difficulty level cannot be adjusted in the middle of a game, it can only be adjusted at the beginning of a new game. The level indicator is located right below the score.

Where's That Shape?

Hurry! demonstrates our inability to see and remember what is right in front of us. If you find yourself getting frustrated, take the time to familiarize yourself with the positions of the shapes before you press that START button. Otherwise, when time is running out, the screen is flashing at you, and you still can't find that slot for the shape that looks kind of like an H, well, try not to panic. It's gotta be there somewhere...

J Peach is 19 years old, and started programming back in the days of the Atari 400. This is his first program for START.

SQ44-ST Removable Cartridge Hard Drives Starting at \$779 complete!

SQ44-ST Cartridge Drives

All SQ44 systems come ready to run with 1-SQ555 SyQuest removable cartridge drive, 2 year warranty on drive - 20Mb 600K/sec. 1 SQ400 cartridge filled with PD software, fully wired for 2 SCSI drives, SCSI/DMA host with formatting software, cable, DMA in & out ports, fan, and FREE SHIPPING to 48 states.

DIALING FOR DATA

Bulletin Board Systems And On-Line Services

BY CHRISTOPHER ROBERTS

Telecommunications Editor

If you're like most computer users you may not understand the excitement that revolves around "telecomputing" (computer-modem communications). Few computer owners realize the wealth of fast and easy information that can be found through a modem. Imagine making your own plane reservations without having to go through an agent. People do this and other great things all the time on-line.

But making plane reservations is a very small part of telecomputing, and that's why this column was conceived. If you own a modem but still aren't sure what it's good for, or are thinking of buying one, follow along and you may learn a few things.

Bulletin Board Services

A BBS is a non-profit service run by local computer users. These BBSs are free to the public and normally cost you only the telephone connection charges. A standard BBS offers one or more of the following services.

- **Electronic Mail** Also known as E-mail, electronic mail is way to privately send a text message (and

in some cases attached software) to a different user of the BBS.

- **Sub-Board Message Service** The "heart" of a BBS system, sub-boards are usually arranged in categories or subjects. The messages you find there are public conversations which any user can join. The subjects range from computers to movies to the latest industry news and rumors.

- **Public-Text Databases** Many

7 ANTIC/START ONLINE Archives

CompuServe STA-10

START ONLINE magazine offers exclusive coverage of the Atari computer world, specializing in the ST and 8-Bit computer lines. Our online magazine offers the following features:

- * DOWNLOADABLE SOFTWARE
- * INDUSTRY NEWS
- * ONLINE ART GALLERY
- * ST AND 8-BIT FEATURE ARTICLES
- * NATIONAL USERS GROUP LISTINGS
- ...and much more.

SOFTWARE SHELF

You can download software from START ONLINE! Every month, our Software Shelf will feature programs from previous issues of START Magazine. Download as many as you like! They're all available at normal CompuServe connect charges.

At the end of every month, Software Shelf programs will be moved into the appropriate Atari Forum Libraries, and new programs will appear on the Shelf.

E 144 Pr 144 Tr 144 St 00 Pr Off Ca 05% Full On Lex 7200 Band 30/2/85

For ST owners, a modem and a telecommunications program such as Flash are all that's needed to begin telecomputing.

BBSs offer news stories and data compiled by the systems operator (sysop, pronounced sis-ahp). These text files are stored in a database format that you can read while on-line or download for reading later.

- **Upload/Download** This is the most controversial of all services offered by local BBSs because it lets anyone send to the "host" (BBS) copies of shareware and public-domain programs that they think

others might find of interest. However, if a BBS is run correctly (and legally), these are the only types of programs that can be exchanged within the host BBS. You can access the files other users have uploaded to obtain your own copy.

An important side note: when you call a BBS be careful that you are logging onto a legal BBS, not a "pirate board." I have had people say to me, "I want to start a BBS so I can get all that expensive software for free." If this is why you want to telecommunicate, be aware that you would be breaking the law. The fines and other penalties can be massive. Besides, program designers put too much work into their software not to receive fair compensation.

- **Games** Downloadable games can be as simple as Hangman or as complex as a Dungeon Master-type role-playing adventure.

Notional On-Line Services

Compared to a local BBS, there's little difference in the type of services offered by national on-line services such as CompuServe, GEnie and Delphi. It's the quality and quantity of extra services that local BBSs are unable to offer that gives their national (and often international) counterparts a special appeal.

On-line services offer paper mail service, electronic stores (where you can buy anything from furniture to stereos), graphic-based games, stock reports, dictionaries, encyclopedias, travel agencies and far more than can be listed here. But these on-line services can only do these wonderful things because they charge a fee based on your baud rate (how fast your modem receives and transmits information), the time of day you use the system and how long you're connected.

One other major difference from your local BBS is the sheer diversity of the on-line service's user base. For instance, people call GEnie from all over the United States and Canada and some from Europe. And the sysops of GEnie and CompuServe regularly schedule on-line conferences with Atari Corp., CodeHead,

comes. It's important to keep track of your current hours on-line to avoid \$200 to \$300 phone bills (it's happened to me!).

You also can run up a phone bill quite easily because the BBS may be in a different call-zone. The difference could be up to 50 cents a minute. Also, baud rate can affect expenses. If you have a 1200-baud modem and call a 50-cent-a-minute service, a DEGAS picture could cost you \$1.50 to download. A 2400-baud modem could cut this time and money by half.

Downloadable games can be as simple as Hangman or as complex as a Dungeon Master-type role-playing adventure.

Gadgets by Small and ICD, to name a very few.

On-line Limits

Now that you know what telecomputing offers, let's look at its limitations.

The telephone rings and the boy connects his (very old) modem to the phone handset. "Shall we play a game?" says the computer voice that answers. Well, War Games was a fun movie, but more than slightly off the beam. Getting into a system to start a war or fix your grades is basically impossible for the common user to do by accident. Besides, it's illegal, so don't even try it.

There still are very few places that let you pay your bills or do your banking by modem. My local supermarket doesn't deliver so they don't have a way for people to order groceries by modem. The local video store has a BBS that I can call to see what's in stock, but I can't place an order. This doesn't mean that it won't happen eventually; it's probably just a matter of time.

The Cost Of Telecomputing

Telecomputing can be very expensive if you're not careful. If you call an on-line service, be sure to call in the non-primetime hours or you may be in for a shock when the bill

Modems And Viruses

Because of its many and varied users, a BBS is an excellent way for a computer virus to spread and there's usually no way to know that you're downloading one. It's the responsibility of the sysop to test for viruses before an item is uploaded to the BBS. But the fact is that most BBS sysops can't test everything — there simply isn't enough time. On-line services do check every file for copyright infringement and virus infestations but they don't always catch them all.

The ST is pretty much immune to boot-sector viruses on hard disks. But the ST floppy is a prime target for infestation. Macintosh and MS-DOS users have trouble with hard-disk viruses quite often because of their disk-based operating systems. Therefore it's always a good idea if you download anything from a BBS to run it through George Woodside's VKILLER to protect your disks. (*Editor's Note:* This program and an accompanying article on computer viruses can be found in the May 1990 issue of START.) There are several Macintosh and IBM virus-protection programs as well. You should use them if you own a PC or Macintosh emulator. ■

NEODESK 3

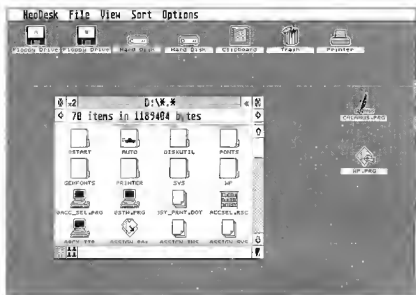

Everything GEM Should Be And More

BY MARIO PERDUE

Most ST users will agree that the GEM Desktop is a great way to communicate with their computer. Atari's graphical interface is easy to learn and use. But after you do use it for awhile you begin to notice that it lacks in some key areas. (That time you accidentally threw a file in the Trash Can and found out it was gone for good was your first clue.)

The problem is that the standard Desktop doesn't go far enough and Atari has made no significant enhancements to it until very recently with the so-called TT Desktop, which isn't available for STs. In its

Figure 1:
NeoDesk's default Desktop. Note the clipboard (a kind of RAM disk) and the printer (lets you both print up to 10 text files) icons.

present form, the Desktop only offers a sample of what's possible through GEM, but leaves the experienced user crying out for more.

NeoDesk 3 offers an alternative. It's a stand-alone program that completely replaces the built-in GEM Desktop. NeoDesk builds upon the familiar point-and-click operation that makes GEM so nice to use and then adds a number of new features.

NeoDesk Basics

When NeoDesk is loaded into memory it establishes itself as the new system Desktop. From this point on all standard file and disk operations are performed by NeoDesk.

The first time you run NeoDesk

you'll enter the default Desktop (see *Figure 1*). This Desktop is not too different from the one you know and love from GEM. The floppy-disk icons replace the file-cabinet icons that Atari supplies, and, if you have a hard disk, you'll notice that the floppy-disk and hard-disk icons are different. The Trash Can for deleting files is still there, though it too looks different.

As you explore your new Desktop, the similarities between GEM and NeoDesk begin to fade. For instance, NeoDesk has a printer icon; simply drag an ASCII text file to this icon to get a printout. (The printer icon works in conjunction with an accessory that batch prints while ►

AT A GLANCE

Program:	NeoDesk 3
Type:	Alternate Desktop
Company:	Gribbit Software P.O. Box 350 Hadley, MA 01035 (413) 584-7887
Price:	\$69.95
Requirements:	512K, hard drive recommended
Summary:	Excellent and very powerful replacement to the standard GEM Desktop.

you continue to use your computer. Up to 10 files can be spooled to the printer at one time.)

On the NeoDesk Desktop you'll also notice an icon that resembles a clipboard. This is a kind of RAM disk that automatically grows and shrinks as you use it. It is especially handy if you only have one floppy disk and wish to make several copies of a large number of files.

Program icons in NeoDesk can be placed directly on the Desktop. Say you have Word Writer buried deep within a folder labeled WP (for word processing). With NeoDesk you can drag the Word Writer icon directly onto the Desktop and access it from there—no need to click through folder after folder. For even easier access, NeoDesk offers a "hot key" option much like CodeHead's HotWire through which programs appear with a simple press of a key.

Cleerer Windows

As with the standard Desktop you can open a window by double-clicking on a disk or folder icon. You'll then see most of the controls with which you are familiar. The only thing that is missing is the horizontal scroll bar. This is because NeoDesk automatically wraps the icons to fit the window.

But NeoDesk includes a few unfamiliar window controls. To the right of the Close button is the Duplicate Window button. Here you can open a window with the same disk and path specification—handy for making copies several levels deep.

In the lower left corner is a button that toggles between text and icon display for that window only. Unlike the GEM Desktop, NeoDesk handles each of its windows separately, so windows with text can exist on the screen with windows of icons.

To the right of this button, you'll find the Select All Items button

which will select or de-select all files in the current path. This icon will act on all the files, not just the ones displayed in the window. The standard methods of selecting files (including the rubber box and the shift key) are also supported.

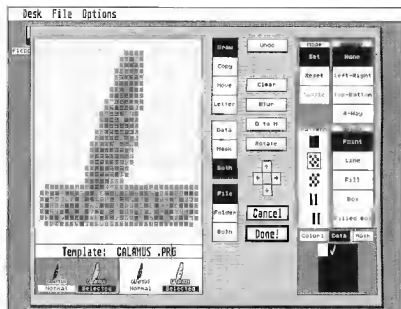

Just below the status line on the window is a double line called the Split Window bar. If your window is large enough, you can slide this bar down and split your active window. This lets you look at two places in the same path without having to open a second window, useful for viewing the contents of folders with a large number of files such as

the Desktop. Much improved over previous versions, it provides all the tools necessary to create new icons and background patterns. (Icons and patterns can even be created using two colors.)

Other NeoDesk Features

The list of NeoDesk features is exhaustive — half the fun is in finding out what they are. For instance, NeoDesk can be removed from memory when you run another program, especially important for 520ST owners. It can also do warm and cold reboots and includes a screen saver which keeps the

Figure 2:
NeoDesk 3
includes an
excellent icon
editor.

desktop publishing fonts.

One final note on windows: NeoDesk opens seven of them at a time. The GEM Desktop allocates only four at a time.

A Picture Is Worth A Thousand Words

Perhaps the most noticeable, if not the most important, of NeoDesk's features is its ability to create custom icons. Imagine how easy it will be to find your telecommunications package if it looks like a telephone. This is just one of the example icons supplied with the package.

NeoDesk includes an excellent icon editor (see Figure 2). You can call the icon editor at any time from

Desktop from burning an image into your monitor.

NeoDesk is resolution independent, which means that it supports any resolution that can be displayed on the ST. This makes it compatible with Monitorm, Bigscreen, Hyper-screen, Overscan and TT monitors.

A command-line interpreter (CLI) is included on the NeoDesk disk to support the use of batch and batch-takes-parameters files. A CLI provides the ST with an MS-DOS-like interface.

Quibbles, Kudos

NeoDesk 3 is a very useful and powerful replacement for the GEM

Desktop — there's really not much that you can't do with it. About the only thing it doesn't do is display directory trees in a manner similar to Dosshell in MS-DOS 4.01. It's surprising that this capability has not yet been implemented on the ST.

The 129-page manual explains how to use NeoDesk and its many features in excellent detail. It's a must read — don't just skim through it (like I did the first time) because there's something important in just about every paragraph. A 50-page addendum is provided for those who upgrade from version 2 to 3.

The problems with CAD-3D and Zoomracks that plagued earlier versions of NeoDesk have finally been resolved. I tested NeoDesk 3 with every program that I have, from paint and CAD to word processing

One of NeoDesk's most powerful features is the Icon Editor.

and desktop publishing. I used every feature of NeoDesk that I know about and I was unable to find any significant bugs. The icon editor in version 2.03 would sometimes crash the resource file, but this version has corrected that problem. NeoDesk 3 is, as far as I am able to determine, bullet proof. (*Editor's Note:* NeoDesk is now compatible with Double-Click's DC SEA, the self-extracting compression method used on the START disk.)

And Some Conclusions

I'd like to say that NeoDesk is a program that every ST owner should have, but that would be stretching things. When you think about it, no one really *needs* a replacement to

the GEM Desktop, but a product like NeoDesk is invaluable if you do want one. This is especially true for hard-drive owners who use

their computer on more than an occasional basis.

But for all its shortcomings, the GEM Desktop fills the job of file-management quite adequately; to the casual ST user, NeoDesk may appear as overkill. And \$69.95 is a lot to pay for something that may never be used effectively. It really boils down matching the product with your needs. If you need the power and flexibility NeoDesk offers, go for it; if not, save your money.

OF RINGS, RESCUES AND REALISM

In Which DeMunn Thanks Her Mouse, Futral Thanks His Son And Knauss Says No Thanks

Rings of Medusa

BY ELIZABETH DEMUNN

The hype proclaims: "You'll love this game — we guarantee it!" Love? Well, you'll definitely establish a long-term relationship with this German import, depending on your ability to cope with logistics, statistics and linguistics.

Rings of Medusa

Consider the language. In translation something is lost, including the player. The brief manual is frustratingly low-wattage and printed in minute italics. You're pretty much on your own to decode the stilted phrases and discover the complicated method of play. Rings of Medusa has

a European flavor that takes some getting used to, as does warm beer.

I Know This Story

Does this scenario ring a bell? Evil goddess Medusa is trying to take over Morenor, a tranquil little kingdom on an backwater planet. She's out to conquer the world with her army from Hell. You, as young

prince Cirion, must find five rings, place them in a temple, and call forth Medusa for the final and deciding battle. In the meantime, you must trade goods, build an army, buy cargo ships and battleships, establish mines, discover treasure, explore a continent and four islands, and generally keep busy. The year is 1432 and time goes by a day a second. It took me seventy years to snuff Medusa.

In *Rings of Medusa*, money is everything. Don't get serious until you have thirty or forty million at least. You start out with a small loan from the bank. Being a gambler, I headed right for a pub and started playing a bastardized version of blackjack. Soon I had enough money to buy some horses and wagons to begin trading.

Squint City

So much is going on at one time that the graphics are necessarily small. For example: A screen depicting a town contains a temple, a bank, a park, a store, a pub, an armory, a barracks, a jewelry store and a harbor if it's on a coast. Plus you have a top screen with a zoom-view of the buildings and a bottom screen with assorted action icons. It's a miniature miracle; take time to examine the remarkable detail of every scene.

The game scrolls effortlessly screen by screen, with changing co-

Dragon's Lair

ordinates and dates always visible above the main screen. To find a treasure or a mine you send out scouts who report success or failure after several days. Then try to pinpoint its exact pixel with a trembling mouse. Frustration sets in. My first mouse ran away to join a research lab. His click quit. But other than an occasional [Return], *Rings of Medusa* depends on an agile, muscular mouse.

Rings of Medusa is cluttered with lists. Don't bother recording prices, quantities or populations. They change. There's a notice board in town to type in important facts. Use it. Mapping isn't necessary, but I did sketch a rough map of the main continent with its 30-plus towns and castles.

Save, save, SAVE after the least lit-

tle stroke of luck. Your pre-formatted save disk can hold at least thirty games.

Cirion To The Rescue

Rings of Medusa isn't for everybody. There are no sub-quests. There are no riddles or puzzles to solve, no never-ending mazes. I admit to spending happy hours shopping and exploring.

Many of my adventurers are long lost in dungeons too difficult to navigate. *Rings of Medusa* was an ego trip because I finally saved a lovely little kingdom from the forces of evil — forever?

Dragon's Lair

BY GARY FUTRAL

"Jump right ... now!" my coach said. ▶

Just Another War In Space

The evil Black Knight's sword sparked and clanged against the floor. He chuckled as he watched Dirk dance. I pressed the appropriate key, causing Dirk the Daring to jump to an adjacent tile to avoid the crackling electrical jolt that raced from the sword tip. But it was too late. Dirk was dirt.

"No! No!" my coach yelled at me and threw his hands up in the air. "You didn't do as I said. You waited too long!"

"Hey, kid. Don't yell at me like that. I'm your father, remember?" My son quieted down and calmly resumed showing me what to do.

All right. I admit I can't play Dragon's Lair. In fact, I would say that if you are under 10 years old you may not want to buy this game. You may find it too easy! Actually, I'm only kidding. The only reason my son did so well is that another kid at his school already had it and told him what to do — at least that's what I kept telling myself.

For those who missed the original arcade version of Dragon's Lair, ReadySoft gives you a second chance to experience cartoon animation. The graphics are computer generated and a joy to watch, listen and play. You really feel like you're watching a cartoon as you interact with it.

As Dirk the Daring, your objec-

I pressed the appropriate key, causing Dirk the Daring to jump, but it was too late.

tive in Dragon's Lair is to enter a castle, make your way past eleven scenes of traps and horrendous monsters to rescue the fair Princess Daphne.

I used the word "scenes" because those are exactly what you are presented. Each scene is predetermined. It is up to you to figure out the correct key combinations (up, down, left, right, swing sword) to get Dirk out of a particular predicament.

Dragon's Lair allows you to use either the joystick or the keyboard. I found that unless you have a joystick that can lock out the diagonal positions the keyboard gives you better control.

So, grab some popcorn, invite your friends and, if you have a pre-teen son, take my advice: keep him handy.

Just Another War In Space

BY GREG KNAUSS

Every once in a while, a reviewer finds a game he desperately wants to like. The program usually comes from a small company, maybe a start-up, and he admires their fortitude. The game usually has several features to respect — unique tricks performed by a sole programmer — and he can easily see how it came to be professionally published. Regrettably, more often than not, the program also has a fatal flaw, something that is fundamentally wrong with it, something that prevents the reviewer from recommending the game. Just Another War In Space has

such a flaw.

In J.A.W.S., the player commands the forces of either the Federation or the Empire, which are engaged in a space-borne civil war.

You can play seven scenarios, ranging from a simple clean-up operation involving little more than launching a few missiles at enemy craft to a full-blown rebellion that takes place over an entire star cluster. J.A.W.S. is an incredibly complex program. It offers an impressive amount of realism, and has enough variables and options to thrill the tactics buff. Track speeds, measure angles, and, for the truly hardcore, the manual offers mathematical formulas to calculate acceleration and trajectory.

Unfortunately, all that impressive realism is lost while playing the game. The user interface J.A.W.S. employs is, in a word, horrible. Non-intuitive and slow, the interface (ignoring the sparse vector outlines of ships) is actually text-based! You almost could play this program on a teletype and not notice any difference. Pseudo-GEM menus and buttons are available, but they are a far stretch from the real thing.

Just Another War In Space has the potential to be not just another computer game. It is a sophisticated program, a strategy game with a lot to offer those willing to muddle through its archaic interface. With a

MULTISYNCH MONITORS

Your One-Stop Resolution Shop

BY DAVID PLOTKIN

Hardware Editor

There's a joke among computer pundits that goes like this: How many programmers does it take to screw in a light bulb? Answer: None, that's a hardware problem.

All kidding aside, in the coming months, in this column we will discuss the world of Atari hardware. We'll cover computers, printers, disk drives, modems — any piece of hardware that has anything to do with Atari computers, including some that normally do not.

Monitoring Your World

One of the most important pieces of equipment you have in your ST system is your monitor. This is your window on the world the ST presents to you.

Atari offers separate color and monochrome monitors for your ST. Until now, you had to use these — there were no low-cost third-party monitors you could use without internal hardware modifications to

Atari Technologies' Omniswitch lets you connect a multisynch monitor to your ST.

your computer. And if you wanted all three ST resolutions, you had to have two monitors.

But while the Atari monitors do a fine job, there are several drawbacks (besides having to have space for two monitors) to the fact that they've been the only game in town. Most notably, they're quite small. The picture area of a standard SM124 is just under 12 inches (measured diagonally). However, there's a substantial black border around the screen, so the working area is more like 9.75 inches (measured diagonally). There's no easy way to

expand the picture area (though we'll look at some not-so-easy ways in the future), so you're basically stuck with the small screen.

Another drawback is that Atari monitors can be quite difficult to find. For reasons

that only Atari knows, the SM124 has been in short supply since the beginning of 1990.

The Alternative

Most present and potential ST owners may not be aware of multisynch monitors. A multisynch monitor can produce both color and monochrome modes in one monitor, alleviating the need to own two different monitors. They're more expensive than the Atari monitors, but are comparable in price to two Atari monitors combined. Plus, they're available in all sizes, up to 25 inches diagonally. Let's take a look at what a multisynch monitor is and how you'd go about connecting one to an ST.

Some Background

The multisynch monitor originated in the IBM world. When the PC was first developed, it had only monochrome text. This was followed shortly by a color mode called CGA, capable of producing four colors on a 320 x 200 pixel screen. Before long, owners of PCs outgrew CGA, and a new standard developed, called EGA. This mode could show 16 colors in 320 x 200 pixels, or four colors in 640 x 350 pixels. A while later, yet another standard emerged, called VGA, with even more impressive characteristics — the ability to display 256 colors in 320 x 200 pixels, or 16 colors in 640 x 480 pixels.

As you can imagine, each of the color modes required different things from a color monitor. The primary difference is that each mode required more information to be displayed on the screen — more

Until now, there were no low-cost third-party monitors you could use with the ST.

colors, more lines of resolution, more pixels on each line. With each increase in graphic capability, a better, faster monitor was needed.

The speed of a monitor is measured by its scan rate, and with each increase in graphics, the scan rate of the monitor had to be higher to remain in synch with the graphic signal coming from the computer. The problem was that you never knew what kind of a program you might run — some were CGA, some EGA, some VGA. The new graphics cards in the PCs could produce signals consistent with any of the modes, depending on what the software told it. But short of owning three different monitors, what could you do? The answer was a multisynch

monitor — one that could sense the scan rate demanded by the computer and automatically synchronize

to that rate. Before long, a whole host of well-known companies brought multisynch monitors to the market.

Scan rates are measured in cycles per second, also referred to as hertz or Hz. The horizontal scan rate is quite a bit higher than the vertical scan rate, and is thus measured in hundreds of cycles per second (KHz). The normal range of scan rates that a multisynch monitor can synchronize to is 15KHz to 36KHz horizontally and 45Hz to 90Hz vertically. This range lets the monitor synchronize to CGA, EGA and VGA. There are monitors that have higher scan rates so that they can synch to extended VGA, but these cost quite a bit more and are unnecessary for ▶

Logitech Hand-scanner

Z-SCAN

with Repro-Studio software to add fantastic special effects to the image. Saves in TIFF, PCX formats for use with Spectre GCR and PC emulators.

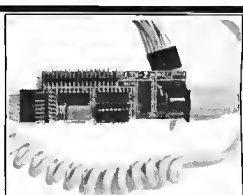

Z-SCAN comes with the Logitech hand-scanner and cartridge port interface and 12volt adapter ready to scan images in upto 400 dpi in 32 grey-scales and supports HP as well as ATARI laser printers and 24-pin head printers for superb output. Call now for sample output and brochure! Incredible software.

most applications.

What It All Means

Now that we have all that out of the way, let's look at what it means to the Atari owner. The ST has two different scan rates, which is why it requires two monitors. For color modes (low and medium resolution), the scan rates are 15.8KHz horizontally and 60.3Hz vertically. In monochrome mode, the rates are 31KHz horizontally and 70Hz vertically. Thus, a standard multisynch monitor can automatically synchronize and produce both color and monochrome modes from a single monitor.

Making The Connection

So, how do you connect a multisynch monitor to your ST? It's not too difficult to build a cable, but the easiest way is the purchase Omniswitch from Talon Technologies.

How many programmers does it take to screw in a light bulb?

This small box has a port on the back to which you attach a standard ST monitor cable to its corresponding port on the ST. There are two multisynch monitor ports (because there are two different types of cable that can be used for a multisynch monitor) to which you attach the cable that comes with your multisynch monitor. Plug in the end of the multisynch cable to the monitor itself, and you now have a monitor capable of displaying all three resolutions.

Caveats

When used with an ST, multisynch monitors have a significant horder, so that a 14-inch monitor produces an active picture area hardly bigger

than that of a standard Atari monitor. Some monitors have controls that adjust the picture size, which can help to elimi-

nate the useless horder. However, increasing the picture size in color mode means you'll have readjust it when you switch to monochrome mode.

Also, you may see monitors advertised (for a considerably lower price) as "multiscan." These are not the same as multisynch. A multiscan monitor can automatically synchronize to a certain fixed set of scan rates — those corresponding to CGA, EGA and VGA on the IBM PC. These rates will do the ST owner no good. ■

New! Version 4.0

YOUR FINANCIAL SOLUTION!

PHASAR

Take Control of Your Financial Future!

Introducing **PHASAR 4.0**; a completely redesigned and improved version of the home accounting program that reviewers and users have consistently found to be the easiest to use and most powerful money manager available.

NEW FEATURES

- 999 expense/income categories
- 500 accounts (VISA/checking etc.)
- Up to 1500 transactions per month
- Set up and analyze finances quickly with new budgeting system
- Artificial Intelligence parser predicts input, minimizes typing.
- Improved interface with multiple scrolling windows
- Print checks the way you want
- Never miss a payment with automatic payment reminder alarm
- Get the job done fast- Completely re-coded for increased transaction and processing speed

PHASAR 4.0 gives you the tools you need to plan and track your finances to ensure that you get the most benefit from your hard-earned income.

PHASAR 4.0 helps with your taxes too. It shows your tax liability at any time and takes the hassle out of preparing your tax return at year-end.

PHASAR 40 even has a built-in date and time organizer to help you keep track of critical events and dates.

TRANSACTIONS

PHASAR's new and improved interface gives you complete mouse control of financial operations. Easily step through account and ledger windows to complete your transactions with a click of the mouse. Plus.....

- Create up to 200 common payees for repetitive entries
- Automatically transfer funds between accounts
- Split - category transactions
- On-line calculator
- Instant context-sensitive help

Additional features include
REPORT, ANALYSIS and TAX
modules.

It's a great way to start the new year! Pick a category, pick a product, and see what the best-known writers in the business thought of it. For all the details, check out the full-length review; issue months are given at the end of each summary.

APPLICATIONS

Canvas

Canvas, Microcal's 4,096-color graphics program for the ST and STE, is a program that tries to do too much and falls short in the basic areas of simple design and user-friendliness.

It runs in all three resolutions and can use the STE's 4,096 available colors. By switching palettes during the horizontal blank period every fourth scanline, Canvas can switch color palettes 50 times a screen and display all 4,096 colors on screen in a single image. Think about it, however: If you want to display all 4,096 colors, you have to set the palette switchpoints and define up to 50 separate palettes for a single image. It takes planning and it takes labor and, frankly, the results are just not worth the effort.

Furthermore, there is no manual, only online help; Canvas creates a whole new set of filename extensions that are not used in any other program; I've wandered into modes where I have a cursor with no response to mouse or keyboard; and the 3D functions in Canvas do not include shading or rendering.

The bottom line is obvious: I don't like Canvas and

I don't recommend it.
Andrew Reese, December

Canvas, \$29.95. Microcal, 3201 Drummond Plaza, Newark, DE 19711 (302)454-7946

Index V

Index V is an anomaly among today's popular ST databases. It's a free-form program that lets you store anything from names to whole pages of text; you retrieve your data by searching for words or parts of words contained within your file.

The author created the program originally for the Sinclair, then released versions for the IBM PC and the ST. Its command-line heritage shows up the instant you load Index — the ST version doesn't use GEM. All commands are located within one of Index's three menus. Many commands are confusing, non-mnemonic acronyms like "SDAT" and "SETC." (SDAT sets the date; and SETC sets foreground color.)

Index is an interesting concept that didn't quite translate from DOS to the ST. It's fine for address files and recipe files, but its complicated commands make it difficult to use.

Karen Gordon, February

Tracker/ST

clude DEGA screen files (32K), STAD (a European format, seen in Megamax's Sketch) and IMG files.

The Readpic manual, though translated from German, is good, and suffers from little of the confusing phrasing common to such efforts. Readpic seems to work and could be quite a time saver for people with lots of text to get into their computer.

David Plotkin, December

Readpic, \$89.95. Dael Computers, 3430 E. Tropicana Ave. #67, Las Vegas, NV 89121 (800)782-9110

Tracker/ST Version 2.0

Tracker/ST is a mailing list database that lets you compile a list of names, addresses, phone numbers and associated information, then use that list to generate form letters and mailing labels in an impressive variety of formats. It is menu-driven and employs on-screen buttons, but is hampered by a nonstan-

dard interface and some functions do not work under TOS 1.4 (*Editor's Note: This is fixed in version 2.03*).

The problems with the interface are because it was written in compiled Superbase command language.

David Plotkin, November

Tracker/ST, \$79.95. Step Ahead Software Inc., 496-A Hindon St. #39F, New York, NY 10014 (212)627-5830

COMPUTER-AIDED DESIGN

Athena II Version 2.0

I tested a beta of version 2.0. Unfortunately, a manual did not accompany the program, so I had to rely on my own resources to find a solution anytime something appeared to be missing. Fortunately, the program is easy to learn.

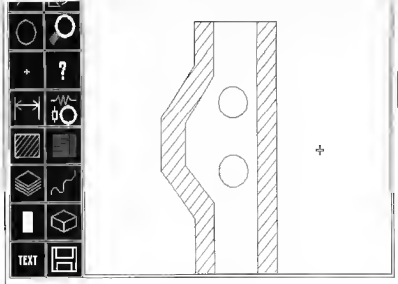

Athena's user interface is ►

reminiscent of a paint program. You're presented with a series of icons along the left side of the screen which select the major functions. Once a function is selected, a submenu pops up in the center of the screen that lets you set the specifics of the command. Since this type of interface is common to many GEM applications, ST users will feel at home with it. However, when working in a drafting environment, I find this to be slightly annoying. I prefer to have the graphics I am working on visible at all times. Having my design covered periodically tends to break my concentration.

There were many capabilities that I feel are necessary for professional drafting which are not available in Athena. It is, however, a good choice for home use, or where you have limited drafting needs and/or a tight budget.

Mario Perdue, November

Athena II version 2.0, \$99.95. Iliad Software, 1470 S. State St., Orem, UT 84057 (801)226-3270

Athena

(as opposed to English).

BeckerCAD comes with supporting libraries. These libraries include electronic schematic, hydraulic/pneumatic and architectural applications.

There is nothing about this package that I found difficult to use. The user interface is easy to learn. It won't take you long to draw that room addition or that model rocket you've been wanting to build for the last several months. For most personal and even some small-business uses BeckerCAD will suffice.

Dave Edwards, March;
Mario Perdue, November

BeckerCAD ST, \$95.00. Abacus, 5370 52nd St. SE, Grand

different approach to CAD. Many of the "normal" CAD commands were missing. It is the author's contention that you only need a few commands to get the job done and the problem with most CAD programs is the sheer number of commands that do exactly the same thing in slightly different ways.

I wholeheartedly agree. It is nice to see a CAD program that doesn't compete feature for feature with every other program. This streamlined approach makes BetaCAD very easy to learn.

I really enjoyed BetaCAD because it had all the "power" features of the more expensive programs, but left out many redundant commands that can get in the way. Nobody wants to be a slave to a CAD system. BetaCAD does a great job of giving the user just the commands needed without getting in the way of designing.

Dave Edwards, January

BetaCAD, \$99.00. BetaCAD, 31 Millard Road, North Auleboro, MA 02760 (508)695-9175

CADjA

This import is so new that I only received a partially-disabled demo version to evaluate.

The user interface is somewhat like DEGAS in that the command menu fills the entire screen and is toggled with the right

mouse button. I found this to be annoying; however, the icons are fairly well-designed and their arrangement on the screen is somewhat logical.

Some commands and modifiers are available only through keyboard entry. Again, I found this to be irritating.

I didn't encounter any problems with CADjA. It seems to be a fairly solid, bug-free product. Once the manual is completed, this program will be a strong contender in the mid-priced CAD arena.

Mario Perdue, November

CADjA, \$395.00. Datel Computers, 3430 E. Tropicana Ave. #67, Las Vegas, NV 89121 (800)782-9110

Drafix

Drafix was ported from the IBM and as such does not use the standard GEM interface. However, the interface is easy to use so this doesn't cause any real problem. The only irritant is that it is assumed that you use a three-button mouse. As we all know, there aren't three buttons on an ST mouse. What you then must do is use the right button as the middle button and hold buttons as the right button (the left button is, of course, the left button). A little bit confusing, but you get used to it.

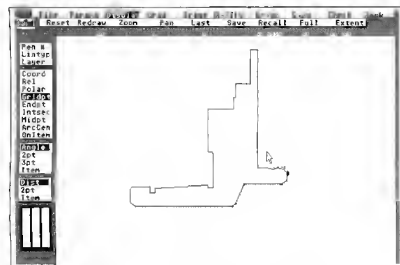

Overall, Drafix is an excellent package for home and small-business use. Unfortunately, Foresight will not publish further upgrades or enhancements.

Mario Perdue, November

Drafix, \$195.00. Foresight Resources Corp., 10725 Ambassador Drive, Kansas City, MO 64153 (800)231-8574

DynaCADD

DynaCADD is, without a doubt, the best CAD program on the ST. It is also

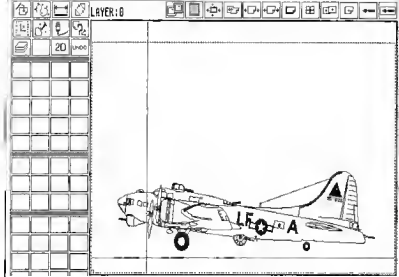

Drafix

BeckerCAD ST

BeckerCAD is a German import and has a reasonable collection of features and performed well in timing tests. Abacus has done a competent job translating the manual into American

Rapids, MI 49512
(616)698-0330

BetaCAD Version 1.0
(Editor's Note: Latest version is 2.0.) BetaCAD is a unique program in many ways; it takes a completely

DynaCADD

the best CAD program that I have seen running on any microcomputer. And it's fast. In many cases, faster than CADD 4X, a very high-end drafting machine.

DynaCADD supports both 2D and 3D entity types, the only ST program to do so. This makes it possible to look at a part from any angle to help visualize its shape. Four different views of a 3D model can be displayed on the screen at any given time. These views can be mixed with 2D graphics for dimensioning.

The documentation supplied with DynaCADD is excellent. It includes both a 2D and 3D tutorial and a complete command reference. Each command includes a clear example of how it is used from the icon interface as well as from the command line.

DynaCADD is the only CAD program that I recommend for professional use (it's a bit expensive for home use). I have used it in a production environment on 3D applications and it performed beyond my expectations.

Mario Perdue, November

DynaCADD version 1.84, \$995.00. ISD Marketing Inc., 2651 John St., Unit 3, Markham, Ontario L3R 2W5 (416)479-1880

DESKTOP PUBLISHING

Calamus

(Editor's Note: Current version is L09N.) There's no question that Calamus is the most powerful of the four DTP programs evaluated for this article. Quite simply, it contains more features and will perform more functions than the others. In fact, it could very well be the most powerful DTP program available right

now for any popular computer system.

The question a would-be buyer needs to ask is "Do I need this much power?"

For the novice user, Calamus can best be described as intimidating. Upon booting it up, new users will find themselves staring at no less than 35 icons, five menus and five alphanumeric fields.

Once you become familiar with the program, however, it operates with an elegant smoothness. After spending a few hours with Calamus, I began to appreciate the flexibility and total control provided by its command hierarchy. For the ST user interested in serious DTP, the investment will be well worth it.

Scott Wasser, April

Calamus, \$299.95. ISD Marketing Inc., 2651 John St., Unit 3, Markham, Ontario L3R 2W5 (416)479-1880

Clip Art! Disks

Each disk contains over 100 high-resolution graphics saved in DEGAS (.PI3) format. Each screen of data averaged about 10 graphics, resulting in fairly small pictures. As a result, they were unuseable with a system using a laser printer but print out nicely on 9- and 24-pin printers. Virtually every subject matter is covered in these collections, including computers, medicine, religion, animals, food and hol-

ids. This is by far the nicest collection I have seen with the widest variety.

Dan Fruchey, March

Clip Art! Disks, \$19.95 each. Magnetic Images, P.O. Box 17422, Phoenix, AZ 85011 (602)435-2006

Desktop Publisher ST

Anyone who has used any other Timeworks program on the ST knows that they are generally characterized by ease of use, flawless operation and enough power to handle most tasks. Desktop Publisher ST fits right into that same mold.

Desktop Publisher ST comes with approximately 200 pictures and nine sample publications. You can use them as they are or modify them for your own documents.

Timeworks claims the novice user can be working within 60 minutes, thanks to the "Quick-Start Mini-Manual." Desktop Publisher ST's documentation is unquestionably the clearest, easiest to follow and most complete I've seen.

Desktop Publisher ST will work very well on the

most basic 520ST with color or monochrome monitor and single-sided disk drive. Since disk access is somewhat slow and frequent, program operation improves dramatically with a hard drive.

Scott Wasser, April

Desktop Publisher ST, \$129.95. Timeworks Inc., 444 Lake Cook Road, Deerfield, IL 60015 (708)948-9200

Draw Art, Scan Art

Both collections are of the highest quality with a nice selection of subject matter. Draw Art is an original collection of 117 GEM metafiles created by graphic artist Tom Ethan. The files are precise, clean and easy to work with. Scan Art is a collection of 114 bit-mapped graphics saved in .IMG format. The pictures were scanned from leading clip-art source books and cleaned up before being saved individually.

Dan Fruchey, March

Draw Art, \$69.95; Scan Art, \$49.95. Migraph Inc., 200 S. 333rd St., Suite 200, Federal Way, WA 98003 (206) 838-4677

Fleet Street Publisher

Michliron, one of the big-

Desktop Publisher ST

gest software supporters of the ST, resurrected Fleet ▶

Street after the importer of the original version withdrew its support. Based on the performance of its version 2.1, Michifron made a wise move in reviving Fleet Street.

Fleet Street is a very capable performer whose assets include ease of use, good documentation, versatile text-editing functions, a

graphic, knowing it exists in your software library, only to give up after sifting through a dozen disks with no success? Well, there's help. Image Cat is a utility package from Wiz Works that locates your graphics files quickly with a minimum of fuss.

There are three main cataloging programs on the

powerful program designed to manipulate text and vector graphics through a variety of special effects. It adds flexibility to ST desktop publishing that rivals similar products on the IBM or Macintosh.

To start Outline Art define an area in which to place your text. In the dialog box that appears, type your message, specify a font and decide whether you want the text rotated, curved or traced upon a predefined path. Click on OK and within seconds your design will appear on the screen. It's that simple.

Outline does not include a print option. If you want to see how your work will look you have load your files into Calamus or convert them to Postscript format, which is a waste of time. A print option is mandatory.

Dan Fruebey, October

Outline Art version 1.0, \$289.95, ISD Marketing, 2651 John St., Unit 3, Markham, Ontario L3R 2W5 (416)479-1880

PageStream

(Editor's Note: Current version is 1.8.) PageStream is characterized by a very flexible and intuitive user interface, great versatility

and tremendous power. Unfortunately, the version reviewed (1.52) is also characterized by some bugs and a tendency to bomb for no apparent reason.

During the many hours I evaluated the program, it bombed perhaps six times. There seemed to be no common denominator to the crashes, although all occurred while my Mega 2's blitter chip was on.

PageStream also displayed a few bugs that seemed to pop up whether the blitter was on or not. None of the few other quirks I encountered showed up more than once.

Despite these flaws, I love using PageStream. It is less rigid than other DTP programs available for the ST in that it doesn't require the user to first create frames or blocks to hold all of the various elements used in a document.

PageStream also offers a wide variety of print options, and — thanks to its own page-description language — print quality is outstanding. PageStream even lets documents be saved as PostScript-compatible files.

Scott Wasser, April

PageStream, \$199.95, Safi-Logik Publishing Corp.,

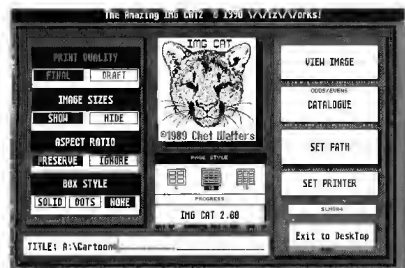

Image Cat

nice collection of clip art and excellent print quality.

But it also lacks some sophisticated features that prevent it from being labeled a state-of-the-art DTP program. It will not support text flow from one page to another, can only import .IMG picture files and ASCII text files, and it lacks the ability to wrap text around graphics.

However, Michifron has released Fleet Street Publisher version 3.0 which supposedly addresses those shortcomings and adds some powerful new features.

Scott Wasser, April

Fleet Street Publisher, \$149.95, Michifron, 3201 Drummond Plaza, Newark, DE 19711 (302)454-7946.

Image Cat

How many times have you searched for a particular

disk, comprising the bulk of the utilities. Image Cat is designed to print image (.IMG) graphics in catalog format. Pic Cat is identical to Image Cat except that it is designed to print DEGS, NEOchrome and Tiny format pictures in all resolutions. For Spectre GCR owners, Mac Cat lets you print pictures designed for the Macintosh.

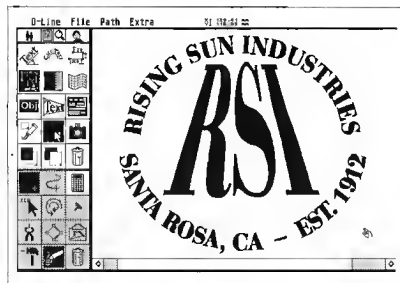

All of the programs in the Image Cat package are self explanatory and easy to use. My only wish is that the utilities be included in one program. On the whole, however, Image Cat is a good send to any desktop publisher or graphic designer.

Dan Fruebey, December

People, Places & Things, Education Graphics, Signs & Slogans

Each of these clip-art collections is comprised of bit-mapped image graphics saved in .IMG format. The pictures were saved in medium resolution and as a result they require some manipulation to print properly. Images are saved in groups so you need to cut and paste individual graphic components. The graphics are fairly simple in design; they lack the detail and finesse of some of the other collections but are still quite useable.

Dan Fruchey, March

People, Places & Things, Education Graphics, Symbols & Slogans, \$39.95 each. Time-works Inc., 444 Lake Cook Road, Deerfield, IL 60015 (708)948-9200

DESKTOP VIDEO

JRI Genlock

The JRI Genlock System lets you combine computer-generated images with an external video source such as a VCR or a video camera. What makes this board so special is that it accomplishes the genlocking process entirely through hardware. This means that all your software is automatically compatible with it. Furthermore, when genlocked to an external video signal, the board delivers a broadcast-quality RS170A NTSC signal for the first time on an ST.

JRI's Genlock is perfect for professional video producers, who can now record on high-quality Betacam, 3/4- and 1-inch videotape for results as close to

PageStream

the original as possible.
*Wilton A. Vargas P.,
November*

JRI Genlock, \$650.00. John Russell Innovations, P.O. Box 5277, Pittsburg, CA 94363 (415)458-9577

TV Titles 2.0

In addition to scroll, TV Titles offers a nice fade, a vertical wipe, a shutter effect like a Venetian blind, a fairly coarse but workable spiral and a confetti-like effect called "Disolve" [sic]. You can elect to leave up the previous image and transition the new image over it or replace the old with the new. Because it's an image-based system, you can't scroll characters onto the screen one at a time.

Overall, I liked TV Titles 2.0. If your needs are modest and you have some other way of generating the text and images you'll use, then go with it. It's reliable and at the price, it's an excellent deal. TV Titles 2.0 is a product of the cottage programming industry and its support system is limited; you have to call the author in eastern Canada for support — and only between the hours of 7 p.m. and 9 p.m.

Andrew Reese, November

Videotext

If you use your ST for graphics that you pipe out to videotape, chances are that you have wished for an easy way to add titles and credits to your productions. Videotext makes adding titles and credits (almost) painless.

to repeat. There's also a lack of consistency in the use of keys and mouse buttons in Videotext.

Videotext is full of nice features, like automatically starting on a black screen so that you can set up your video equipment and start your recorder. It's designed to work with the JRI Genlock and should produce some rather professional images with it.

Andrew Reese, July

Videotext, \$125.00. Water Fountain Software, 13 E. 17th St., 3rd Floor, New York, NY 10003 (212)929-6204

Vidi-ST

Now, instantaneous captures of the fastest-moving subjects are possible on any ST or Mega. Captured shots are dramatically clear and black-and-white pictures are shaded in 16 tones or 16 colors in low resolution.

Vidi-ST is a snap. You can see every frame instant-

TV Titles 2.0

This definitely isn't a program that you're going to master in one quick session. It takes a few hours of work until you understand how to control all the effects available.

There are some troubling aspects to Videotext. It crashed on me several times in ways that I was not able

ly as it is grabbed, in a flowing on-screen animation. A video camera is not required, since you are able to use any VCR and even some modern television sets as a video source. The included software is quite easy to learn, offering most commands both from drop-down menu bars and ▶

Vidi-ST

from mouse-click boxes along the screen bottom. The miniature manual should be read, though, since some of the controls (like the synchronization and the aspect ratio) are very simple, but only if you know what they're for. Most users will be capturing quality video within minutes of opening the box.

EDUCATION

Algebra I

This introduction to algebra presents linear equations to junior high schoolers. It covers theory, gives examples, then asks students to solve algebraic equations and word problems.

Algebra I has five levels of difficulty and teaches using real-world problems such as investments and motion. Its tutoring abilities are its best feature. The program walks students through

problems, giving hints and facilitating conceptual understanding. Computer sessions can be printed.

Kerry Whelan, October

Algebra I, \$29.95. Midflon, 3201 Drummond Plaza, Newark, DE 19711 (302)454-7946

First Letters And Words

First Letters and Words uses voice instructions to guide the young user through its four games. The parent or teacher can control the content and level of difficulty.

Non-readers can learn the alphabet, both upper- and lower-case letters, while beginning readers can

learn the names of the parts of a dinosaur's body or puzzle out the answers to an animal riddle game.

Kerry Whelan, October

First Letters and Words, \$29.95. First Byte Software, Clauset Center, 3100 S. Harbor Blvd. #150, Santa Ana, CA 92704 (714)432-1740

First Shapes

Mr. Ted E. Bear introduces the preschooler to shapes in this full-featured program from First Byte. The bear talks to your children, asking them to choose activities by pointing to large picture boxes and clicking the mouse. There are four games: a Concentration clone, changing shape sizes, designing toys out of shapes and choosing the right size shape.

Because of its many features, First Shapes is a good value. Best of all, reward messages can be personalized with your child's name.

Kerry Whelan, October

First Shapes, \$29.95. First Byte Software, Clauset Center, 3100 S. Harbor Blvd. #150, Santa Ana, CA 92704 (714)432-1740

French Verb Tutor, Spanish Verb Tutor

Beginning linguists can use the first of these programs' four levels to test themselves on regular verb conjugations. The advanced level provides fluent linguists with a reference dictionary of conjugations using all tenses and persons. The programs know conjugation rules for any verb, regular or irregular.

Kerry Whelan, October

French Verb Tutor, Spanish Verb Tutor, \$49.95 each. AS-DE Inc., 151 rue Jolicoeur, Hull, Quebec J8Z 1C8 (819)770-7681

Geography Tutor

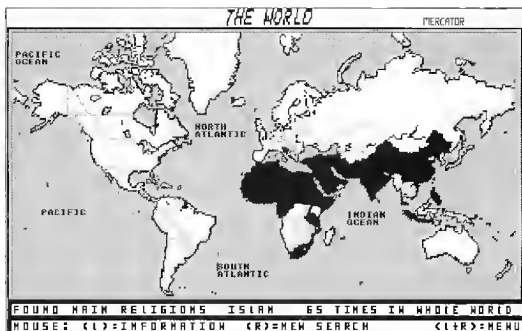

Geography Tutor is quite good for what it does and is a solid educational package. The ability to update and modify the database is a strong point, as are the compare and quiz features.

Compared to the quality of maps found in an actual paper atlas, the maps in Geography Tutor are greatly inferior. This, however, is not the author's fault — he's limited by the computer screen resolution. More close-up maps of areas of the world with lots of small

countries would have been an improvement. Some of the maps are quite distorted from what I am accustomed to, South America in particular. Also, close-up maps of Asia, Antarctica and Australia must be purchased at extra cost.

Ron Schaefer, November

Geography Tutor, \$39.95. ASDE Inc., 151 rue Jolicoeur, Hull, Quebec J8Z 1C8

Geography Tutor

(819)770-7681

Kid's Stuff

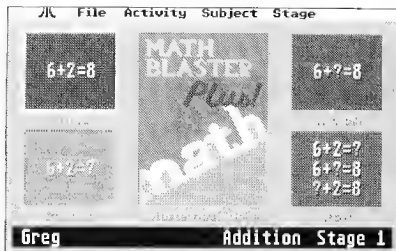

Kid's Stuff offers three activities from a picture-style menu: counting, letter recognition and free-style typing. Its charming graphics and gentle pace will appeal to the typical pre-schooler. By counting correctly or typing the correct letters of a word, graphics on the screen come to life. The simple presentation of all three activities suits young children that are just beginning to figure out a keyboard and a mouse. To a limited extent, you can tailor the program to meet individual needs.

Kerry Whelan, October

Kid's Stuff. \$39.95. Stone and Associates. 7910 Ivanhoe Ave. #319, La Jolla, CA 92037 (619)459-9173

Linkword — French

Dr. Michael M. Grunberg

MathBlaster Plus

designed this program to help students get a basic grasp of French quickly and easily — which it does very well. An audio disk and printed glossary help with pronunciation. The program covers basic grammar, leading to simple sentence translation.

The Linkword series is visually and phonetically based. For example, once I've imagined Mike Tyson carrying a deer on his shoulders, I'll remember that deer is masculine.

The program works like

flash cards, giving students the option of a predefined lag time to visualize the word before it disappears. There is a lot of travel-oriented vocabulary in Linkword, which makes it appealing to the vacationer.

Kerry Whelan, October

Linkword — French. \$29.95. Artworx Software Co. Inc., 1844 Penfield Road, Penfield, NY 14526 (716)385-6120

Magical Math I

In Magical Math I, part of

Atari Corp.'s Bentley Bear Series, a math question must be answered so Bentley can accomplish his task. The number of digits in the operation, type of operation and amount of time allowed to answer the question can be changed.

It would be nice if there were more action on the screen and if input from the numeric pad or keyboard was allowed. But since so few educational programs will run in color and monochrome, it's a great resource for owners of monochrome systems.

Kerry Whelan, October

Magical Math I. \$29.95. Atari Corp., 1196 Borregas Ave., Sunnyvale, CA 94086 (408)745-2000

MathBlaster Plus

cy, but with its solid drill and practice functions, MathBlaster Plus could be found in any elementary school's computer lab. The manual for the program is detailed and clearly explains the five options available. With its editor, parents can design and print test papers. MathBlaster Plus includes a record-keeping function for teachers.

Kerry Whelan, October

MathBlaster Plus, \$29.95. Davidson and Associates, 3135 Kashiwa St., Torrance, CA 90505 (800)556-6141

Math Talk

Professor Matt A. Matics leads his students through both drills and games in Math Talk.

The game Table Talk presents your child with addition, subtraction, multiplication and division questions. In Mystery Number, he or she has to figure out the missing numbers in math problems. Parents and teachers can customize the drills, print questions and record the results. Children who do well in math may lose patience with Math Talk's slow response time.

Kerry Whelan, October

Math Talk, \$29.95. First Byte Software, Clamnet Center, 3100 S. Harbor Blvd., #150, Santa Ana, CA 92704 (714)432-1740

Math Wizard

The imaginative graphics and liberal use of color make Math Wizard appealing to children and adults. Wizards, dragons, trolls and elves help players through four different drills disguised as games.

A warning to parents: dramatic sound effects follow both right and wrong answers. Children may enjoy making mistakes as

Batman, The Movie

much as they like getting the answers right! To prevent any problems, children may need some supervision when playing.

Kerry Whelan, October

Math Wizard, \$39.95. Unicorn Software, 2950 E. Flamingo Road, Las Vegas, NV 89121 (702)737-8862

Read-A-Rama

Read-A-Rama teaches word recognition and spelling skills, using a colorful circus theme. Parents can customize the word lists.

First the child is presented with a picture and word (there are six different pictures in a number of different categories). To test reading, a memory game asks kids to find the objects from different categories. The child can be asked to type the name of the picture in the spaces provided.

Kerry Whelan, October

Read-A-Rama, \$49.95. Unicorn Software, 2950 E. Flamingo Road, Las Vegas, NV 89121 (702)737-8862

Space Math

Space Math is an adaptation of the popular arcade game Lunar Lander. Players must answer math questions in order to safely land a space ship on the moon. Black holes, meteors and the effects of gravity are combined with math equations so the higher levels are a real challenge; by Level 8

players had better know their math!

Kerry Whelan, October

Space Math, \$14.95. Intracorp Inc., 14160 SW 139th Court, Miami, FL 33186 (305)252-9040

EMULATION

PC Speed

At the current time, the only hardware PC emulator that works to my satisfaction is Michifron's PC Speed. It is fast, compatible, handles hard drives and is available now. The incomplete manual notwithstanding, this emulator works and works well. Soldering is required for installation.

PC Speed, \$199.95. Talon Technologies, 243 N. Highway 101 #11, Solana Beach, CA 92075 (619)792-6511

Spectre GCR

(Editor's Note: Current version is 3.0.) Spectre GCR's emulation isn't perfect: there are some programs that won't run or that crash when you attempt to use certain features. However, most Mac software that "followed the rules" runs very well on Spectre. And with each version of the Spectre software, more programs run correctly.

Spectre GCR is a very

large cartridge, the largest I've seen. The cartridge supposedly works best when it is at the end of the drive chain, although I have had no problem with it heing in the middle.

If you're serious about running Mac software on your ST, this is for you.

David Plotkin, January

Spectre GCR, \$299.95. Gadgets by Small Inc., 40 W. Littleton Blvd., #210, Littleton, CO 80120 (303)791-6098

SuperCharger

The important questions about SuperCharger are: does it work and is it fast? The answer to both is yes. It works, running all the PC software I tried. The SuperCharger is also fast — it ran PC programs such as Lotus 1-2-3 and Microsoft Word quickly. Graphics-based software was very fast, although the text software had a somewhat slower screen-update speed.

Provided that Talon can handle the DMA chain problem with SuperCharger, this is a product that can change your ST from a friendly, powerful computer to an unfriendly, powerful computer: a PC!

David Plotkin, January

SuperCharger, \$450.00. Talon Technologies, 243 N. Highway 101 #11, Solana Beach, CA 92075 (619)792-6511

GAMES

Archipelagos

In the far future, Earth has been poisoned and it's up to you to purify the land.

Archipelagos' vivid and weird graphics capture the spirit of the game. The eerie landscape is a simple, clashing checkerboard of poisonous reds and bright greens set against a grey sky

and crystal blue water, inhabited by twisted creatures drawn in creepy detail. Full of strange reverberations and eerie melodies, the sound also helps create an appropriate, ominous mood.

Overall, Archipelagos is one of the most original games I've seen, both in gameplay and in overall concept. Despite it's seek-and-destroy nature this is no shoot-em-up, but rather a futuristic fantasy strategy game.

Carolyn Cushman,
January

Archipelagos, \$39.95. Britannica Software, 345 Fourth St., San Francisco, CA 94107 (415)546-1866

Artura

Basically, Artura is a hack-and-slash game. There isn't much to this

game, but you do have more challenges than chopping up barbarians and giant rats. Hidden somewhere along the way are the pieces to the sacred Runestones. When they're used separately or in combinations, they give you the power to use the wheel of Cerridwen, which helps you on your quest to rescue Nimue.

Artura could be better in many ways. It's not too exciting in the way of play and it resembles at least a dozen other platform-style games on the market. But, the challenge of finding the Runestone did add some depth and gave me incentive to dig deeper.

Greg Perez, June

Artura, \$14.99. Virgin Mastertronic, 18001 Cowan St., Suite A, Irvine, CA 92714 (714)833-8710

Batman, The Movie

Data East and Ocean have done an excellent job bringing the excitement of the Batman film to the ST.

The various sequences are all very enjoyable and well done. The Batmobile sequence (which uses a Pole Position-style perspective) is as good as many stand-alone driving games on the market. The graphics throughout the game are great and there are some nice still shots shown before each sequence.

The only weak point in Batman is the sound. You can choose between music (which didn't remind me much of the film's music) or sound effects (which are pretty standard stuff). Some digitized effects from the movie would have been a nice touch.

Clinton Smith, October

Batman, The Movie, \$39.95.

Data East, 1850 Little Orchard St., San Jose, CA 95125 (408)286-7074

Blockout

Just when you thought you had finally mastered Tetris, along comes Blockout from California Dreams. Like Tetris, the idea of Blockout is to fill an empty rectangular column with falling blocks. The difference is dimension; the Blockout screen is in 3D.

To further challenge you, the dimensions of the pit can change. You can select Custom Pit Dimensions and Rotation Speed for the blocks themselves. The ability to set up configurations makes Blockout endlessly challenging.

The graphics are sharp and the game has a bouncy sound track. You'll find yourself coming back again ▶

Blue Angels

The U.S. Navy's Blue Angels are noted the world over as one of the best of the best when it comes to formation and single aircraft acrobatic flying. Accolade offers an excellent simulation of that and more in the program **Blue Angels: Formation Flight Simulation**.

The main attractions are the F/A-18 Hornet and the Blue Angels' airshow flight routines.

After practicing in the simulator, put your skills on the line. Go for it. This is where the real thrill is. You'll be surprised how good it feels to make the pilot's list.

Wolf Griffe, December

Blue Angels, \$49.95. Accolade, 550 S. Winchester Blvd., Suite 200, San Jose, CA 95128 (800)245-7744

Chaos Strikes Back

The packaging for **Chaos Strikes Back** claims that Dungeon Master is required to run the program. This is not strictly true; you do not need your original **Dungeon Master** disk to play the game. However, **Chaos Strikes Back** is impossible to play if you don't know how to play **Dungeon Master**. Not only is there nothing in the manual telling you how to control your characters and move around, but to survive in **Chaos Strikes Back** you have to have gotten far enough in **Dungeon Master** to learn how to cast important spells and fight monsters.

START's editors have intermittently discussed using

Chaos Strikes Back

a rating system for game reviews. Such a system could use Siskell & Ebert-style "thumbs up" or "thumbs down"; or a small graphic showing a little man in a chair sleeping, applauding or cheering; or a standard one- to four-star rating. So to give you an idea of what to expect from this long-awaited sequel, I offer this objective assessment of **Chaos Strikes Back**: two thumbs — being bitten off. A little man — fleeing for his life. Four stars — all shooting fireballs at you. Heidi says, check it out.

Heidi Brambaugh, June

Chaos Strikes Back, \$39.95. FTL Games, 6160 Lusk Blvd., Suite C206, San Diego, CA 92121 (619)453-5711

Clue Master Detective

In glancing over the notes I have been honored to gather during the course of my long relationship with Sherlock Holmes, I am struck by those pertaining to the murderous affair at Boddy Manor.

Holmes had been contacted the previous week by a gentleman with the unusual name of Virgin Mastertronic, who claimed to have made significant improvements to Charles Babbage's calculating machine, which he called a computer. In order to publicize his efforts, he proposed to test his invention's logical skills against those of the world's

only consulting detective.

Alas, Mr. Mastertronic's invention was no match for Holmes' remarkable mental qualities. My friend had whispered the solution to me a full two turns before the machine deduced the murderer.

"So, Mr. Holmes, what do you think of our experiment?" the Parker brothers asked him as we begged our leave.

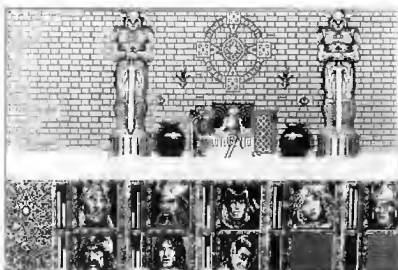

"An absorbing enough amusement for amateurs," he said, "but finely honed intellects like mine prefer a

maze-chase game (*Pac Man* will do); add two parts **Dungeon Master**; sprinkle with a modified dash of **Tower Toppler**; throw in a cup of hot, hip, happenin' shoot-em-up; sift in a bit of a moderately trite, but very atmospheric SF plot; top it all off with the very best features from the latest batch of action-adventure games; bake at the hottest action level and what have you got? **Day of the Viper**, the newest release from Accolade and probably one of their best to date.

The programmers have done just about everything right. Everything, from the look and feel of the buttons on your console to the interface, have been implemented exquisitely.

Matt Laurence, November

Day of the Viper, \$49.95. Accolade Software, 550 S. Winchester Blvd., Suite 200, San Jose, CA 95128 (800)245-7744

Dragons Of Flame

real chase that pits one human mind against another."

Dr. John Watson, June

Clue Master Detective, \$39.99. Virgin Mastertronic, 18001 Cowan St., Suite A, Irvine, CA 92714 (714)833-8710

Day Of The Viper

Take one part classic

Dragons Of Flame

A sequel to *Heroes of the Lance*, **Dragons of Flame** is Strategic Simulations' second attempt to translate the wildly popular *Dungeons & Dragons* Dragonlance module to a computer role-playing game. The result is more of an arcade hack-and-slash with fantasy elements than

an intricate role-playing adventure.

As you progress in the game, you discover better weapons, potions and treasures, but other than looking for hidden doors and traps, there are no intricate puzzles to solve. The interaction with the creatures you encounter is pretty much limited to combat, although you run into townspeople who offer you clues and join your party.

The Dragons of Flame characters don't grow with experience and their attributes remain fixed, which leads me to my biggest problem with the game: It lacks the feeling of absolute control over an entire party of real characters, a hallmark of any good role-playing game.

Harvey Bernstein, May

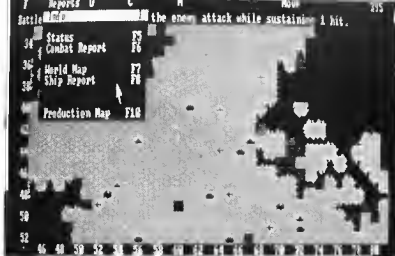

Dragons of Flame, \$14.95.

675 Almanor Ave., Sunnyvale, CA 94086
(408) 737-6800

Empire

Empire, by Interstel Software, is an elaborate strategy game in which you try to spread your superior military forces over the world and thereby conquer it.

Since the size of the playing board is tremendous, a game can last several days, with fleets growing to contain hundreds of armies, fighters and ships. Fortunately, the program's excellent interface makes managing your forces practical.

I recommend Empire to anyone who prefers strategy games to arcade shoot-em-ups or games of chance. In this game, everyone begins with the same resources. Winning depends upon tactical skills, clear thinking and organization — not to mention knowing thy enemy.

Empire

Eye Of Horus

Eye of Horus is a classy game. The characters, story and hieroglyphs are based on authentic Egyptian mythology. The music is very atmospheric, lending to the feel of the game, and the graphics are attractive

and occasionally amusing.

It is also a long game, however, and there is no save-game feature (though there is a pause key). In addition, it is very easy to die without accomplishing much — don't expect to get very far in your first few games; the evil guys are sneaky until you know where to look for them and the amulets don't look much like the pictures in the manual.

Matt Laurence, November

Eye of Horus, \$39.95. Britannica Software, 345 Fourth St., San Francisco, CA 94107
(415) 546-1866

Falcon Mission Disk - Operation: Counterstrike

I soon discovered that my orders for Operation: Counterstrike were no picnic.

These 12 jobs were linked. I could come back sometimes after a tough mission, only to find more of those tanks trying to tear up my runway. No more single-strike flights.

Fortunately, both aircraft systems and flight controls had been upgraded. But, as always, bad came with the good. My opponents were flying MiG-29A Fulcrums. Head to head we were about even.

After the mission I told my C.O. a few things. I definitely like the improve- ▶

Future Wars

Future Wars begins with you washing windows, working "at what, believe it or not, is your full-time job." From this ignoble beginning you will travel thousands of years through time and circle the planet to save the Earth from alien invaders in this immensely enjoyable graphics adventure.

The emphasis in the last sentence should be on the word "graphics." This is the one area where the game easily outshines its adver-

the forest?

Despite this minor point, Future Wars is a lot of fun. *Greg Kniauss, December*

Future Wars, \$49.95. Interplay Productions, 3710 S. Sierra St., Suite 100, Santa Ana, CA 92704 (714)549-2411

Hillsfar

Hillsfar is an adventure role-playing game that sports pretty good graphics, but is somewhat short on plot and long on frustrating "arcade" sequences.

The actual reason for you being in Hillsfar is never made clear. There's a vague reference to a despot and a merchant named Malthair, but nothing definite: no royalty to rescue, no dragon to slay. The biggest challenge is trying to figure out what buildings are safe to enter and which ones put you into a mad race to escape the guards.

Within Hillsfar, you can recruit assistants, try to

Simulations Inc., 675 Almonor Ave., Sunnyvale, CA 94086 (408)737-6800

Indiana Jones And The Last Crusade: The Action Game

Whoever designed Indiana Jones and the Last Crusade: The Action Game had to be, well, a sadist. I was hours and hours into gameplay and still hadn't made it through the first level. It would take another two weeks of sleepless nights before I'd finish the game. What were they trying to do to me?

Yet as I struggled through each level, died innumerable deaths and alternately cursed and praised the programmers, I realized that I wasn't just playfully addicted to Indy, I was obsessed.

If you're wondering how the game compares to the movie, I'll tell you: the movie's better, but that's shorter because it's shorter.

Tom Byron, February

Indiana Jones And The Last Crusade: The Action Game, \$39.95. Lucasfilm Games, P.O. Box 10307, San Rafael, CA 94912 (415)721-3300

Indiana Jones and The Last Crusade: The Graphic Adventure

Creating a graphic adventure based on a film is a tricky business. If you follow the plot too closely it won't be very fun or challenging for people who saw the movie. On the other hand, if the game has few or no ties to the picture, fans will be disappointed. With Indy: The Graphic Adventure Lucasfilm walks the tightrope perfectly.

One of the best features of Indy is that there are multiple solutions to many of the puzzles and you don't have to do things exactly the same way that

they happened in the film. Another nice touch: While you can try to fight your way out of a confrontation, you can also choose to try to talk your way out by selecting a response from a group of onscreen choices.

Clinton Smith, October

Indiana Jones and the Last Crusade: The Graphic Adventure, \$49.95. Lucasfilm Games, P.O. Box 10307, San Rafael, CA 94912 (415)721-3300

Maniac Mansion

Just as there are cult movies, so too are there cult games. One of those is Lucasfilm Games' Maniac Mansion, a crazy and funny adventure game filled with monsters and madness.

This is a game that's fun to play with three of your friends (or kids) hanging over your shoulder, telling you what to try next. Just be sure that you save the game often, as there's no telling when one of your team will meet an untimely demise — like just going to the kitchen for a snack!

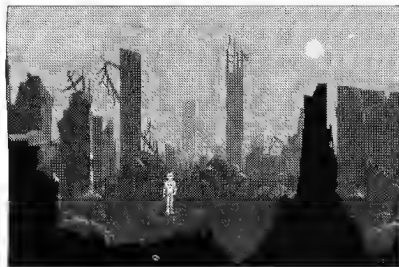

If you like graphic adventure games, you'll want Maniac Mansion. Absolutely. It's not only a cult classic, but a fun way to spend (quite) a few hours.

Andrew Reese, April

Maniac Mansion, \$19.95. Lucasfilm Games, P.O. Box 10307, San Rafael, CA 94912 (415)721-3300

Pipe Dream

Pipe Dream pits you against one of the most horrifying opponents imaginable — sewer sludge, or in this case, the dreaded flooz. As plumber in charge, you must pipe this gunk away as it flows from its source. You've got a well-filled pipe rack, with a variety of shapes (elbows, straights and cross pieces) to place

Future Wars

turing competitors.

The thing most likely to annoy more seasoned adventurers is the immaturity of the puzzles, the sort of things that anyone can see are obviously puzzles: Why is there a monk's habit hanging on a tree branch? Why is there a rope lying in

coax or buy information from the citizenry, practice your archery at the range and generally try to figure out why you are spending so much time playing this game.

Dan Plotkin, March

Hillsfar, \$49.95. Strategic

on the gridded playing field. Unfortunately, you can only take the bottom piece in your dispenser.

Overall, I found the game addictive enough to keep me returning time and again to try for a higher score or a higher level. If not for its excessive cuteness and minor glitches, I'd rate this as a classic strategy game, right up there with Qix and Tetris.

Carolyn Cushman, August

Pipe Dream, \$29.95. Lucasfilm Games, P.O. Box 10307, San Rafael, CA 94912 (415)721-3300

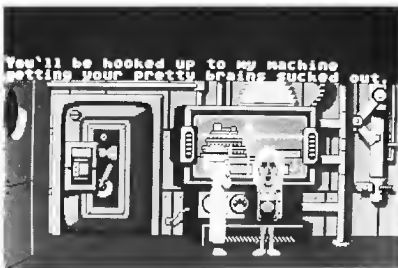

Pirates!

For anyone with fire in their souls and sharpened steel at their sides, 17th-century life as a pirate on the Spanish Main must have been glorious. ST owners can now get a taste of that glory, thanks to an award-winning program that is as special as the swashbuckling era it recreates.

Pirates! can't really be classified in any one software category, because it deftly blends the best elements of role-playing, arcade action, strategy and

simulations into an engrossing adventure.

During the course of playing Pirates!, you'll have to trade with merchants, negotiate with politicians and scoundrels, sail and navigate the Caribbean,

Maniac Mansion

search for buried treasure, plunder towns and fight battles using cannons, swords and muskets. The drawings are rich in character and detail, although animation is a bit choppy and not overly impressive.

Scott Wasser, July

Pirates!, \$44.95. MicroProse, 180 Lakefront Drive, Hunt Valley, MD 21030 (301)771-1151

Populous

The classic role-playing game lets a player assume a different persona to fight evil or find a hidden treasure. But the ultimate role to be played has to be that of a god. And Populous lets

fun and challenging game. It's unlike any other computer game I've ever seen. Don't miss it, unless you're a dyed-in-the-wool arcade gamer who has no time for strategy.

Andrew Reese, January

Populous, \$49.95. 1st Stop Computer Systems, P.O. Box 20038, Dayton, OH 45420 (800)252-2787

Powerdrome

Take the thrills of today's Grand Prix racing and high-speed jet piloting, integrate them with the excitement of future automotive technology and you've got Powerdrome, probably the hottest and the most imaginative racing simulation available for the ST. Just watching this game being played will send tingles down your spine.

To be totally honest, the graphics in Powerdrome are awesome! They truly have to be experienced to be appreciated. Sometimes I find myself unconsciously bobbing and weaving my head to avoid getting beamed by a low overhang that the racecar narrowly clears on the screen. Powerdrome pushes you and your ST to ►

you take just that role.

There is only one goal in Populous: to defeat your rival god. As you move about the landscape creating lands for your followers and disrupting your rival's civilization, you'll see your opponent trying to do the same to you. When your population reaches a peak, you can call for the ultimate battle, Armageddon.

Populous is a fascinating,

Silhouette Graphics Auto-Tracing for the Atari ST

- Load, modify or create raster graphics images and auto-trace them into GEM vector graphics.
- Auto-tracing features: 1) straight line identification, 2) curve smoothing, 3) curve fitting, and more.
- Open IMG, Degas and MacPaint file formats. Save in IMG format.
- Drawing features include polygons, stars (3-99 pts./sides), parabolas, b-spline smoothing.
- Contour data files or screen areas; similar to altitude contours of a topo map.
- At least 1 Mbyte required. Works in Hi Rez and big screen monitors. Math Coprocessors supported.

Expose'

A Desk Accessory for ST Desktop Publishers and Graphic Artists

- View and clip out graphic files from Expose' GEM window, capture screens.
- Show disk free space, system memory and view and edit system time and date.
- Enter directly into Expose' features by suppressing Ctrl/Alt/Shift keys when selecting Expose'.
- Access the Atari ST extended ASCII character set and send a character string to an application.
- Load and view Degas, Degas compressed, Tiny, Neeochrome, IMG, GEM metafiles and MacPaint files. Converts low and medium resolution to high resolution.
- Comes with special reference files (*.IMG) for Symbols, Dingbat character to keyboard configurations, and font family displays.

Also From Maxwell Fractal Fantasy ~ 2D/3D Mandelbrot Fractals, Degas Format. Megstenders ~ Megs ST keyboard extension cords (6,8,12,25).

Project Neptune

As Agent Rip Steel, you must destroy the undersea bases of the Yellow Shadow, who is mining uranium to sell to countries which would probably not make peaceful use of it. So begins Epyx's Project Neptune, a game which effectively combines strategy and action into a playable contest.

Project Neptune is lots of fun. Its arcade sequences are extremely well done, yet it is heavy with the need to make strategic choices.

There are a few minor bugs with Project Neptune, and often in the heat of battle you end up in the wrong operating mode. The ending is anticlimactic, but you'll see what I mean when (if?) you get there.

Despite the minor complaints, Project Neptune is a rollicking good time.

David Plotkin, February

Project Neptune, \$34.95. Epyx, 600 Allerton Drive, Redwood City, CA 94063 (415)368-3200

Quest For Glory

Quest For Glory, originally released by Sierra On-Line as Hero's Quest, seamlessly

and entertainingly meshes the character development and skill building of role-playing games with the problem-solving framework of the traditional adventure. This is one of those rare games that has replay value upon completion.

As has been the case with Sierra's previous releases, the graphics are excellent, particularly the animated characters you meet along the way. Conversa-

ra On-Line, P.O. Box 485, Coarsegold, CA 93614 (800)326-6654

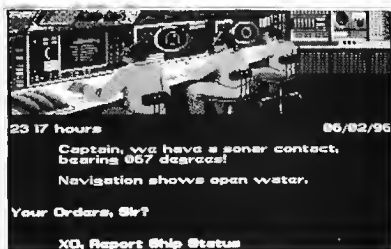

Red Storm Rising

The manual is a veritable arsenal of information; it is, in fact, your best weapon. It consists of Operations, Captain's and Reference Manuals.

There are four Challenge levels. Introductory is recommended for the first few games. Normal is best for the casual players. Serious sees the enemy as up-to-speed, so you better be as well. The screen says it all for the Ultimate level: "Life can be brutal and short." On any level, however, Red Storm Rising is great strategic fun. Even if it is one of the last, it will rate as one of the best.

Wolf Griffey, June

Red Storm Rising, \$44.95. MicroProse, 180 Lakefront

Red Storm Rising

tion with other characters is much more important in this game than previous titles; there is a pretty convoluted plot to unravel.

Aside from some minor quibbles, Quest For Glory is highly recommended. The humor, storyline and replay value make this a classic.

Harvey Bernstein, December

Rick Davis' World Trophy Soccer

Based on the name alone, I had great expectations of Rick Davis' World Class Soccer. But unfortunately, it turns out to be more B class than World Class. As a parced down — almost arcade style — game, it's fine, but as a true sports simula-

tion, it's too limited.

The game is somewhat redeemed, however, by its simplicity. It's pleasant enough as an afternoon diversion. You can play it without the manual. But you don't need docs for pinball either. If you're looking for some serious sport, better get your ball and head outside.

Scott Wasser, June

Rick Davis' World Trophy Soccer, \$39.99. Virgin Mastertronic, 18001 Cowan St., Suite A, Irvine, CA 92714 (714)833-8710

Risk

Perhaps you, like myself, have fond memories of the Parker Brothers board game Risk. For those not familiar with it, simply put, each player starts out with armies stationed in countries around the world, then everyone tries to wipe out every other player's armies and conquer Earth.

This computer version is as good as the original board game. The interface is easy to learn and easy to use, but playing against another person means swapping seats in front of the computer. On the other hand, if the computer is your opponent, it's almost ludicrously simple to out-strategize it since it always chooses Australia to defend.

Wolf Griffey, December

Risk, \$39.99. Virgin Mastertronic, 18001 Cowan St., Suite A, Irvine, CA 92714 (714)833-8710

Robocop

It doesn't take long to figure out what Data East's Robocop is all about — just plug in a joystick, boot the game and start blasting away. That's all there is to it: no reading people their rights, no following "dne

course of the law."

Which is not to say that Robocop is a bad game. It certainly looks good, although the animated figures could be a little larger. There are nine levels and each one presents you with a different way to obliterate the opposition. Make sure you have a good joystick on hand — movement can be a little haphazard, especially when jumping.

Dave Gregg, June

Robocop, \$39.95. Data East, 1850 Little Orchard St., San Jose, CA 95126 (408)286-7074

Shufflepuck Cafe

Shufflepuck Cafe is a fast-action game reminiscent of air hockey. It's fun to play, and as with most games of this type, adds some features that can't be found in the real-world counterpart.

Your opponents in Shufflepuck Cafe are a motley crew, each with a unique style of play. You can select

Rick Davis' World Trophy Soccer

your opponent from the opening screen, or use the practice droid.

Shufflepuck Cafe has fast action so expect to feel it in your mouse-hand muscles after you play it for awhile. It's exciting and fun, with

good graphics and sound. If you like air hockey, or any fast-paced game that requires nimble move-

ment, check out this game.

Dave Plotkin, July

Shufflepuck Cafe, \$39.95. Broderbund Software, 17 Paul Drive, San Rafael, CA 94903 (415)492-3200

Space Ace

Based on one of the most visually stunning coin-op arcade games of all time, this sci-fi follow-up to Dragon's Lair makes beautiful use of the ST's incredible 16-bit audio-visual capabilities.

While attempting to stop the evil Borf's plans of global conquest, Ace's sidekick, Kimberly, has been captured. Ace must make his way through Borf's evil traps so he can rescue her and put an end to Borf.

Space Ace features gorgeous background scenes and incredible, smoothly-animated characters cavorting within them. This is the best animation I've ever seen on the ST.

Unfortunately, many scenes from the arcade have been left out. The coin-op also featured multiple paths through the game so you could choose to go one way ▶

Space Quest III

Space Quest III: The Pirates of Pestulon is a playable, novice adventure particularly suitable for people getting their first taste of adventure gaming.

The graphics and animation are excellent. As you guide the hero, Roger Wilco, around the screen, he has a shadow in the lighted parts, and gets smaller if you move him towards the back of the room. The price you pay for all this is that each new room must be loaded from disk, an interminable process if you're using floppy disks.

All of the Space Quest series have had a touch of

crs' Ralph Kramden.

David Plotkin, January

Space Quest III, \$59.95. Sierra On-Line, P.O. Box 485, Coarsegold, CA 93614 (800)326-6654

Star Command

There are basically only two things that can happen in **Star Command**: communicating and fighting. Your encounters with other ships and beings are either friendly or hostile. If you have code-breaking skills, you can attempt communication, and try different tactics, like impersonating a deity or pleading for mercy. If you cannot achieve meaningful relations, fight.

The controls for **Star Command** are somewhat cumbersome. They consist of single-key commands, and question/answer interaction. A number of bugs showed up, and there are al-

Stik-Gripper

ent missions show up each time you start a new game, it remains a challenge.

David Plotkin, April

Star Command, \$14.95. Strategic Simulations Inc., 675 Almaror Ave., Sunnyvale, CA 94086 (408) 737-6800

Stik-Gripper

The hand is not the steadiest of appendages, particularly for playing computer games. At the most critical times, a slip of the wrist can mean the difference between life and death. That's why a product like **Stik Gripper** is so handy. It's a joystick holder that keeps your game control rock solid. Flight simulation fans who often rely on both the keyboard and joystick will find **Stik Gripper** especially helpful. There appears to be a limit to the kinds of joystick it can accommodate. Know before you buy.

Dave Gregg, October

Stik-Gripper, \$18.95. Duggan DeZign Inc., 300 Quaker Lane, Suite 7, West Warwick, RI, 02886 (800)843-1223

Super Hang-On

I've never been much for car and motorcycle simulations — they all seem to do the same thing and once you've tried one, you've tried them all. Well, opinions can and do change.

Graphically, **Super Hang-On** is a treat — when

you speed up, you really feel like you're speeding up. And the scenery even changes as you travel across the various continents. For instance, as you zip through North America, you see the hulking skyline of New York city change to the greenery of the northeast coast and the deserts of the southwest.

Dave Gregg, June

Super Hang-On, \$39.95. Data East, 1850 Little Orchard St., San Jose, CA 95125 (408)236-7074

Table Tennis

My first thought about a table tennis simulation was "Why bother? Haven't we evolved beyond Pong?" But **Table Tennis** is as far from Pong as the ST is from the old Atari 400. It's an excellent simulation of a serious, misunderstood, sport.

Game perspective is similar to what you see when you're actually playing table tennis (nobody who is serious about the game calls it ping pong); you look straight at your opponent across the table. Your opponent can be a friend or the computer. There are 20 fictitious computer foes to choose from, each possessing a different style and ability level.

About the only serious shortcoming in **Table Tennis** is you cannot practice serving. It takes a while to develop an effective serve, just as in real life. But then, that's why this is a real simulation.

Scott Wasser, June

Table Tennis, \$34.95. Digitech Software, 703 W. Buffalo Ave. #200, Tampa, FL 33603 (813)222-0006

Targhan

The graphics and sound in **Targhan** are outstanding. The Targhan-character is big

Space Ace

silliness, but **Space Quest III** is the most outrageous of them all. Everywhere you turn, there's off-the-wall humor. The Starship Enterprise makes an appearance, and Roger even does an imitation of the Honeymoon-

so some things I never did figure out, such as why a weapon sometimes showed up with an asterisk next to it.

Despite these small annoyances, **Star Command** is quite playable. Since differ-

and animated in a very life-like fashion. The backgrounds are often stunningly beautiful with little animated extras such as a browsing deer or a squirrel climbing up a tree.

I found Targhan to be a pleasing balance of adventurous exploring and arcade action, something that is not all that easy to find in computer games. And because of this balance, Targhan can be enjoyed on two levels: either as hack-and-slash arcade slaughter or as a role-playing quest. And the fact that it runs in monochrome as well as color will only heighten its appeal.

John S. Manor, March

Targhan, \$29.95. Digitech Software, 708 W. Buffalo Ave. #200, Tampa, FL 33603 (813)222-0006

TV Sports: Football

The graphics in TV Sports:

TV Sports Football

Football are fair. The players move quickly and change direction with every twitch of your joystick. Balls can be kicked or thrown as precisely as you can control the stick. It can, however, be difficult to see whether a ball is caught or dropped, and occasionally, a runner's progress is impeded by a blocker or stopped by a tackler even though there appears to be daylight between the two players. Although TV Sports:

Football has its drawbacks, it ranks far above most other sports simulations. Thanks to the responsive graphics and excellent user interface, it is a great deal of fun to play.

Scott Wasser, June

TV Sports: Football, \$49.95. Cinemaware Corp., P.O. Box 5083, Westlake Village, CA 91359 (800)527-4391

Wayne Gretzky Hockey

To some fans, ice hockey is a sport of power and vio-

lence. To others, it's a well-choreographed dance of finesse and precision. And to still others, it's a strategic battle of the wits; a chess game on ice. Wayne Gretzky Hockey is all of these. It's one of the most complete, realistic and engrossing computer sports simulations ever created for the ST.

Scott Wasser, June

FA.ST Tape Backup

The drive is fast, accurate and works very well. It isn't cheap, but it will pay for itself in peace-of-mind and in the ability to easily restore your precious data if you should ever need to.

Is the FA.ST Tape Backup for you? If you don't store lots of important data on your hard drive, or you really do backup to floppy on a regular basis, then I guess not. But if your livelihood depends on that data, or you value your peace of mind, then I highly recommend it. For just a few minutes a day, you can make sure your data is backed up and safe. And, the first time you have hard drive trouble, you'll be extremely glad you did buy one — I know, because it's already happened to me.

David Plotkin, May

FA.ST Tape Backup

FA.ST Tape Backup, \$999.95. ICD Inc., 1220 Rock St., Rockford, IL 61101 (815)963-2228

Lynx

All its hype is justified: The games available for the Lynx are some of the most addicting in years and overall the system blows Nintendo's GameBoy out of the water.

The 4MHz processor keeps the action fast paced and custom chips handle tasks normally done in software. The hardware allows for an infinite number of sprites, has a built-in scaling system to create realistic scenes as you approach or move away from objects and has collision detection. Internally, the joystick and buttons use switches with conductive rubber contacts that provide high reliability.

Atari's Lynx is a really high-quality game system. The action is very realistic, fast, and smooth. I have gone through three sets of batteries and several hours of AC power in only two weeks of use. Atari has a hit in their hands, literally.

Stephen Mortimer, April

Lynx, \$179.95. Atari Corp., 1196 Borregas Ave., Sunnyvale, CA 94086 (408) 745-2000

MASTER-3S Disk Drive

The MASTER-3S from Konyo International looks very much like the Datel

drive. The MASTER-3S, however, has a standard connector, so you can replace the cable if it fails. It also sports a daisy-chain connector, making it suitable as either an A: or B: drive. The MASTER-3SD, which sells for \$20.00 more, displays the track number.

James Burton, December

Master-3S Disk Drive, \$169.00. Konyo International, 1073 N. Batavia St., Suite B, Orange, CA 92667 (714)633-1026

MegaByte Disk Drive

The MegaByte drive from MegaByte Computers is almost the twin of the Datel RF302R. Approximately the same size as the Datel, it also lacks a removable cable and a daisy-chain connec-

tor via a cable attached to the ST's joystick port. This arrangement leaves your joystick port unusable, unless you have a connector which allows you to plug two joysticks into one port. Another option is to buy the external power supply from MegaByte, which costs \$19.95.

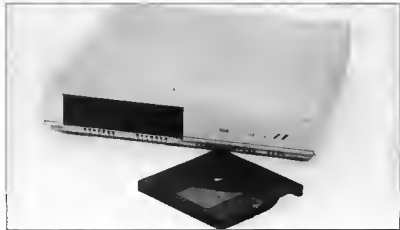

James Burton, December

MegaByte Disk Drive, \$139.95. MegaByte Computers, 909 Melbourne, Hurst, TX 76053 (817)589-2950

Megafile 44

I've not opened up Atari's Megafile 44, so I don't know its internals. The case is much like a Megafile 30 case, with a hole cut in it for the hard disk to go through. I would guess Atari is using their standard ACSCSI-SCSI interface boards and power supplies. I have no idea why Atari, which can build things less expensively than anyone else, is charging more than its competition for this drive.

Atari, as usual, supplies their HDX software; you'll want HDX 3.01 (or later) to handle these drives, as special software is needed to handle changing hard disks in mid-session.

Megafile 44

tor, plus, it does not have a power switch.

The unique thing about the MegaByte drive is that it draws its five volts of pow-

— *David Small and Doug Wheeler, March*

Megafile 44, \$119.5. Atari Corp., 1196 Borregas Ave.,

Sunnyvale, CA 94086
(408)745-2000

SQ-44 ST

The drive's technology is based on the Syquest 44MB removable cartridge. In other words, the actual "platter," the place on the hard disk where data is stored, is portable between Syquest drives. The platter itself is protected by a very tough clear-plastic case.

The Carter Graphics case we saw is light, compact and very portable, about the size of a half-height hard disk and power supply; if you need to lug around a disk drive, this is ideal. It would easily fit in a briefcase.

Carter Graphics also offers a Syquest disk pack crammed full of Atari ST public-domain programs, pictures and so forth, for \$15 over the cost of blank media. When I identified

myself and asked some fairly technical questions, they had no trouble answering them.

David Small and Doug Wheeler, March

SQ-44 ST, \$779.00 (base price). Carter Graphics, 914 W. Sunset Blvd., St. George, UT 84770 (301)628-6111

Toadfile 44

Toadfile 44

The Toadfile case is pretty big; it has room for another drive internally, which

could be just the ticket if you'll plan to expand later. (Adding the drive would be a matter of extending the SCSI cable inside — a few hour's easy work at most).

The Toadfile 44 units are essentially the same component brew as the Megafile 44 and the SQ-44 ST: box, power supply (off-the-shelf

the Syquest 44 meg SCSI drive. That's it. The ICD interface gives you a battery-backed-up clock as well, so your ST doesn't forget what time it is when you turn off the system.

Each drive connects through the ST's DMA port, and can be "daisy-chained" with other DMA equipment, such as the SL-804 laser printer, other hard disks, CD-ROM players, etc.

David Small and Doug Wheeler, March

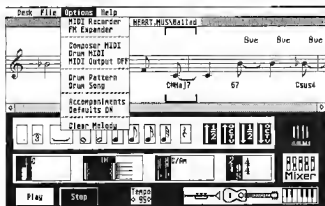

Toadfile 44, \$799.00. Toad Computers, 536 Baltimore Annapolis Blvd., Severna Park, MD 21146 (301)544-6943

RF302R Disk Drive

The Tadel RF302R is so small that its tan-colored metal case is barely larger than the drive mechanism. Like most drives, it has an On/Off switch in the back

FM MELODY MAKER

"A Symphony Of Sounds At Your Fingertips"

FM Melody Maker is a digital synthesizer, sequencer, drum machine, and recording studio all in one. Includes cartridge and software for just \$149.95.

Apprentice Software announces

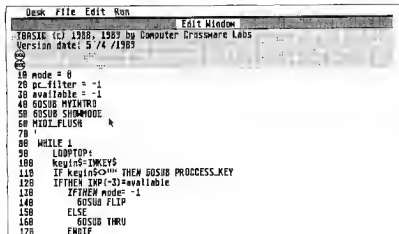

Neural-Network Construction Set 1.0

Neural networks are a newly emerging artificial intelligence technology that is being successfully applied to such diverse problems as image and pattern recognition, regression analysis, sales forecasting, chemical reaction product distribution prediction, medical test analysis, airport bomb detection, automatic control, music composition, econometric modelling, modelling of dynamic systems, and others too numerous to list.

The NCS is a full-featured, GEM-based neural network simulation program which permits the user to set up, train, and use arbitrary feedforward back-propagation trained neural networks. To the user, the neural network appears as a "black box" which he can train by "showing" it examples of the correct responses to inputs. After the network has "learned" the training set, the user can create a GEM-based stand-alone application which he may distribute as he chooses without any programming. Sets of examples with which to train the network as well as inputs to the network may be entered as numbers, characters, YES/NO values, and as pixel images. Other features include -- fast integer based arithmetic which utilizes the 68000's single instruction multiply and divide, and fast look-up table threshold functions for faster training, as well as slower but more precise floating point based training -- graphics preprocessing options which reduce image bandwidth and permit faster training and smaller networks - complete manual with examples and an introduction to neural networks.

MIDI

Cubase

Once you've laid hands on a product that makes your work faster or more intuitive, it's painful to go back to the old ways. That's my gut response to Cubase. Cubase combines the best of several sequencing styles

into a logical and efficient graphical environment.

Cubase version 1.5 sports a number of enhancements over the original release version; a new editing window, a new quantization type, an Auto Save function, support for Monitors' 19-inch monochrome monitors, built-in mouse accelerator and the list goes on. In addition, compatibility problems with GDOS and TOS 1.4 have been corrected (though it's still incompatible with the popular Pin-Head system accelerator program from CodeHead).

Any sequencer with this range of capabilities and such a friendly and efficient graphic environment is attractive. If you've got the bucks, Cubase is highly recommended.

David Snow, August

Cubase, \$579.00. Steinberg/Jones, 17700 Raymer St.

#1001, Northridge, CA 91325 (818)993-4091

Dr. T's T-BASIC

T-BASIC is the first programming language for the ST designed specifically to interface with a high-end MIDI sequencer. It's a superset of ST BASIC and runs either as a stand-alone program or under Dr. T's Multi-Programming Environment. In addition to the standard repertoire of BASIC statements and functions, it provides command and data-structure access to Dr. T's popular Keyboard Controlled Sequencer (KCS) and the sequence data files created by it. The manual shows you how to adapt standard BASIC programs to run under T-BASIC.

If you know standard BASIC and are looking for a way to do some MIDI programming without writing a lot of low-level code, T-BASIC may meet your needs, especially if you own KCS. If you're already a programmer and use a sophisticated editor you may feel a bit cramped in the T-BASIC environment.

Steve Johns, May

Dr. T's T-BASIC, \$149.00. Dr. T's Music Software, 100 Crescent Road, Suite 1B, Needham, MA 02194 (617)455-1454

Final Cut

Final Cut has everything a

musician needs in a software sequencer. Furthermore, it's designed to resemble a multitrack tape deck which makes it very easy for beginning musicians to learn MIDI, while still being useful to professionals.

The program makes good use of GEM, letting you use your mouse for all processing (though there are keyboard equivalents for most functions). One nice feature is the ability to set your own expertise level. When you're first learning, you get more help but, as you become familiar with the program, the help disappears and doesn't get in the way.

I put it to the test, playing complex pieces like Gershwin's "Rhapsody in Blue." It handled all four hands of fast piano without a lost note. Overall, Final Cut is simple enough that the beginner won't be lost, advanced enough that the professional will be comfortable and perfect for everyone in between.

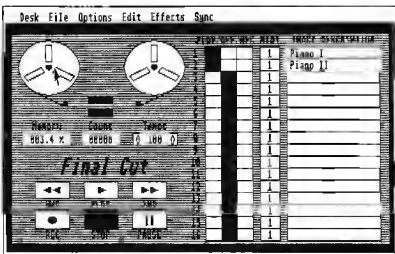

Rick Duff, February

Final Cut, \$89.95. Legend Software Systems, 3508 34A Ave., Edmonton, Alberta T6L 5E8 (403)450-0736

Pro MIDI Player

The basic function of the Pro MIDI Player is to access and play a large number of MIDI sequences without having to load from disk during a performance. Standard MIDI level 0 format files are supported (single stream, multichannel), as well as real-time recording of MIDI sequence and system exclusive data.

Unfortunately, there are absolutely no editing capabilities. Only record and playback are implemented, along with a couple of features such as a text file to accompany sequences and

Final Cut

external display of song name and status messages to synthesizer alpha-numeric displays.

As is often the case with software designed for complex musical requirements, Pro MIDI Player offers some nice features while excluding others that many people may find necessary. For example, there is no way to automatically send a Start message at the beginning of playback to trigger a drum machine (or a Stop at the end!).

Should you have your performance system around the Pro MIDI Player? This depends largely on your budget. For the price, it offers a reliable performance system that will continue to grow as more updates become available.

Mihai Manoliu, October

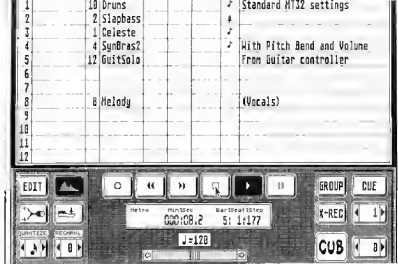

Pro MIDI Player, \$99.00. Pro MIDI Systems, Box 13, Lanier, WA 99146 (604)447-6264

Tiger Cub

Leave it to Dr. T's to bring MIDI to the novice user. Tiger Cub is a synthesis of several Dr. T's programs: The MIDI Recording Studio, Keyboard Controlled Sequencer (for recording and playback), TIGER (graphical MIDI data editing) and The Copyist (scoring). It also includes The Multiple Program Environment (Dr. T's proprietary multi-application manager), which lets you switch between up to eight other Dr. T's programs, depending on your memory configuration.

The manual explains the basics of the programs in Tiger Cub, as well as general MIDI concepts, and includes a short tutorial, reference tables and index. But the program is so friendly that you'll soon use the manual as a reference rather than a crutch.

The folks at Dr. T's Soft-

Dr. T's Tiger Cub

ware have clearly gone out of their way to make Tiger Cub intuitive and instructive. Once you understand the basic concepts of MIDI, you'll be making music with the best of 'em.

—Robert Edson, November

Tiger Cub, \$99.00. Dr. T's Music Software, 100 Crescent Road, Suite 1B, Needham, MA 02194 (617)455-1454

UTILITIES

DC Utilities

(Editor's Note: Current version is 2.0.) Every so often a utility comes along that's so valuable you wonder how you ever got along without it. Double-Click Software's DC Utilities is a package that includes seven (count 'em) such wonders.

DC Squish compresses executable programs, like .PRG, .TTP and accessories. DC Xtract is one of the fastest programs for extracting ARC files. DC Deskey lets you define your own menu equivalent keyboard commands. DC SEA takes an ARCD file and converts it into a self-extracting ARC file. DC Desk Organizer lets you customize your desktop; it creates a .PRG file that sets up the desktop exactly as you specified in the .INF file. DC Ramit lets you set up a RAM disk with any available drive.

Overall, DC Utilities is an outstanding buy. The programs are not copy pro-

tested and customer support is excellent, both by phone and BBS. This package definitely has my recommendation.

David Plotkin, August

DC Utilities, \$39.95. Double-Click Software, P.O. Box 741206, Houston, TX 77274 (713)977-6520

Diamond Back Version 1.0

(Editor's Note: Current version is 2.0.) The most unique feature of Diamond Back is that you can specify exactly what you want to back up. This program can back up your entire disk, perform an incremental backup, back up only selected directories or files, and compress and encrypt files.

The restore dialog box lets you restore to any drive partition, but you must tell the program if the files are compressed or encrypted. Oddly, the program doesn't code this information on the disk.

Diamond Back is a very powerful, flexible program that does the job it is intended to do and does it very well. It comes with an excellent manual and is highly recommended — especially for its incremental backup feature.

—David Plotkin, January

Diamond Back, \$39.95. Data Innovations Inc., 127 N. Front St., Rising Sun, IN 47040 (312)438-3733

Hard Drive Turbo Kit

This package of hard-drive utilities includes a backup facility and an optimizer combined in one program called Toolkit. The other program in this package is called M-Cache, which provides a RAM cache for your hard drive.

Toolkit doesn't really have a manual. Oh, there's a bunch of paper stapled together and labeled "Manual," but it is absolutely worthless. None of the items in the drop-down menus are explained, nor why you might want to use some of the more arcane ones.

Fortunately the cache and optimizer programs aren't complicated enough to suffer from the poor documentation. All three pieces of the package are solid and useful, even if you aren't brave enough to experiment with the mystery functions.

David Plotkin, January

Hard Drive Turbo Kit, \$59.95. Microfilm, 3201 Drummond Plaza, Newark, DE 19711 (302)454-7946

Universal Item Selector III

The Universal Item Selector is probably one of the most popular products ever developed for the ST. It is an invaluable substitute for the inadequate file selector native to the ST's operating system.

With its many enhancements, it is well worth the price, and the upgrade policy (\$5 with US \$1) is more than fair. The small manual is excellent and a great improvement over earlier versions as well. This is one of those pieces of software that, once you've tried it, you don't know how you ever lived without it.

David Plotkin, December

Universal Item Selector III. ▶

\$24.95. Application and Design, 909 NV Starlite Place, Grants Pass, OR 97526 (503)476-0071

WORD PROCESSING

1st Word Plus

The big brother of 1st Word, this document processor is a welcome relief to users who are still using the original program released in the early days of the ST. All files from the original program are completely compatible, but 1st Word Plus adds enough options to make it infinitely more valuable than its predecessor. It can import pictures and works with the fonts included with your printer.

A powerful mail-merge program and picture-conversion utilities are included within 1st Word Plus along with an intelligent spell checker that uses a 40,000-word dictionary. At this time, 1st Word Plus is the only program that incorporates graphics and still allows access to a spell checker.

Dan Fruchey, April

1st Word Plus, \$99.95. 1st Word Plus, P.O. Box 15008, Portland, ME 04101 (207)874-0702

Script

Script includes multiple fonts, graphics importation and an effective interface that make it an impressive product, until, that is, you try to print.

Installing Script is a snap. It is completely GEM-based, and very fast. It can display up to four documents in separate windows.

Script supports the usual word processing functions. It saves and imports ASCII text, but cannot read any other format.

The problems with Script are primarily in the

printing. Margin settings are particularly frustrating. You cannot set the right or bottom margins, only the left and top. To add to the frustration, these margin settings don't get saved so you must set them every time you reload the file. Printing with the top margin set causes a document to run off the bottom of the page in normal printing mode, although not in draft mode.

David Plotkin, October

Script version 1.0, \$79.95. Megamax Application Systems, 1200 E. Collins #214, Richardson, TX 75081 (214)699-7400

Tempus II

Tempus II is a slick text editor that provides almost any option a programmer could ever ask for. It includes a built-in RPN calculator, character-conversion tables, and a unique file-selector box with masking templates for locating source codes. It uses its own desktop that includes GEM-like icons such as a trash can, clipboard and disk drives.

I can only recommend Tempus II for programmers; it's too specific for those who only need to edit text on a casual basis. It takes sometime to understand the many modes available in this text editor, but learning time is much shorter than that required with a text processor.

Dan Fruchey, April

Tempus II, \$79.95. Micflrou, 3201 Drimmond Plaza, Newark, DE 19711 (302)454-7946

Wordflair Version 1.0

(Editor's Note: Current version is 1.12.) Goldleaf finally released Wordflair, a unique document processor that at one time was to have been released under the Atari software label. Word-

flair combines multiple GDOS fonts, math functions, a graph generator, database and graphic importation with text processing in an exciting way. The program creates everything internally except image and metafile graphics, which must be imported.

It's the closest thing I've seen yet to an all-in-one product. Wordflair is great for creating forms and form letters and will increase speed and flexibility in business settings. With Wordflair you can concentrate on creating a page, not the half a dozen additional programs you normally need to create a page that uses all of these page components.

Dan Fruchey, April and June

Wordflair, \$99.95. Goldleaf Publishing Inc., 700 Larkspur Landing Circle, Larkspur, CA 94939 (415) 461-4552

WordPerfect

One of the most powerful text processors available on any system has made its way to the Atari market. While it's a little option heavy for many home

other products because of the many options available. The program is highly configurable and, once you have defined base page layouts and your own macros, much of the page-creation process is automated.

Product support is excellent, with regular upgrades and unlimited phone support from knowledgeable representatives. Atari owners who have used the program on PCs will have no problem running WordPerfect almost immediately.

Dan Fruchey, April

WordPerfect, \$250.00.

WordPerfect Corp., 1555 N. Technology Way, Orem, UT 84057 (801)225-5000

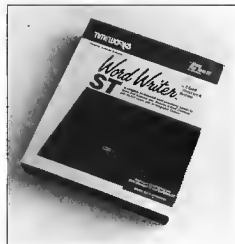

Word Writer

At the time of this writing, Word Writer is the most popular text processor available for the ST. Small wonder: It's well rounded, easy to use and logically organized. The program takes advantage of almost every standard word-processing function the average user requires.

The program includes a document outliner, thesaurus and spell checker with a 90,000-word dictionary.

The dictionary is not very intelligent, slowing the correction process, but it is adequate for most uses. The only major addition that can be made is a footnoting function. Timeworks has not released an upgrade in two years but they provide ongoing support by phone.

Dan Fruchey, April

Word Writer ST

users, it will cover any growing needs.

Learning to use the functions completely requires more time than most

WordWriter, \$79.95. Timeworks Inc., 444 Lake Cook Road, Deerfield, IL 60015 (708)948-9200

How To Get START Programs Up And Running

1) Write protect your disk. Move the tab on the back of the disk so that you can see through the hole in the disk case. This prevents the accidental deletion of files on the START disk.

2) Make a backup copy. We format the disk using TWISTER.PRG (from the December 1990 issue) to increase the size of a double-sided disk to 800K. You can always copy the START disk onto a hard drive. To back up onto a floppy, run STARTCOPY.PRG (it's on your START disk) and follow the instructions. Have a blank disk ready.

3) Store the original and use the backup.

4) Some of the files are compressed so that we can fit more programs on the disk. In this issue the compressed files are GRAMMARC.PRG, HURRYARC.PRG, and TIGERARC.PRG. These files must be uncompressed before they can be used. We use Double Click Software's DC SEA utility to create self-extracting archive (ARC) files. To un-ARC a program, simply double-click on the filename.

5) When the dialog box appears, choose Extract.

6) When the file selector appears, choose a destination disk (hard disk, RAM disk or floppy disk) for the uncompressed files.

If you are not sure how to use your file selector, refer to your ST manual or your replacement file-selector documentation. Do not attempt to use your START disk or backup copy as a destination disk — there isn't enough room to hold the files. Make sure the destination disk has enough space for the uncompressed files, whose sizes are given below:

HURRYARC.PRG — 79K

GRAMMARC.PRG — 243K

TIGERARC.PRG — 537K

The screen goes blank, then the files are listed as they are extracted, and marked "OK" if the uncompression is successful.

7) To use the rest of the programs (the un-ARCD ones) on your START disk, simply copy

them to another disk. Please refer to the article which describes the program for instructions.

Problems

Problems with your START disk? It is possible that the disk has been damaged in transit. To receive a replacement copy, follow the procedure below.

Subscribers: Call Subscription Customer Service at (815) 734-6309 on weekdays 7:30 a.m. to 10:30 p.m. Central Time. Your subscription will be confirmed, and a replacement disk will be sent to you.

Non-subscribers: Send your original START disk to START Disk Replacement, 544 Second St., San Francisco, CA 94107. A replacement disk will be sent to you.

Consoling Words

After ANALOG folded, I opted to have the remainder of my subscription transferred to ANTIC. However, my current subscription status with ANTIC does not reflect this.

I've also heard that ANTIC has ceased publications, but that subscribers will be receiving START, which will have an 8-bit section, but no 8-bit disk. This is a terrible loss for the Atari community. If it is any consolation, let me express my gratitude for your effort in putting out such a quality magazine for so many years. I sincerely hope you'll continue to fight for an 8-bit corner in START.

Ed Hall

Yellowknife, Northwest Territory
Canada

As you know, the economics of the dwindling 8-bit market forced us to merge ANTIC into START. Adding former ANALOG subscribers at the same time was a major project that delayed the mailing of START to ANTIC subscribers while the databases were merged correctly. The mailing label on your latest copy of START should show your new expiration date. You should get two issues of START without disk for every issue of ANTIC or ANALOG with disk. ANALOG non-disk subscribers will get one issue of START for every issue of ANALOG remaining, but the ANALOG subscriptions weren't actually added in until the December 1990 issue. If your label still doesn't reflect these changes, or any other problems crop up, call our

subscription customer service at (815) 734-6309. — ANTIC ED.

Exasperating XMM801

The Atari XMM801 is a fine but exasperating printer. As an owner, I have had to learn some helpful tricks in adapting it to work with some commercial software, and I'd like to share a couple of tips.

To use some Hi Tech programs such as PrintPower and AwardWare, boot the program and go to Printer Set-Up. Select the ESC2-IBM printer and you will return to the main menu. Now choose Select Options. This presents another menu. Choose the Send Line Feed option, and return to the main menu. Save these selections, and you're in business. ▶

SHIPPING INFORMATION: Prices do not include shipping and handling. Add \$5.00 for small items (\$8.00 Min. for Canada). Add \$8.00 for disk drive. Add \$3.00 for C.O.D. Calif. res. include 7.25% sales tax. Mastercard and Visa accepted if your telephone is listed in your local phone directory. All orders must be pre-paid with money order or cash. International and APO orders must be pre-paid with cashiers check or money order. \$20.00 minimum on all orders. All orders accepted TUESDAY THROUGH THURSDAY 9:00 am to 5:00 pm PST.

I/O BOARD

When you use single sheets of paper the printer stops printing at 60 lines. To use envelopes or shorter pieces of paper, you need to send a simple, one-line BASIC command to your printer. Turn on the printer, then type:

LPRINT CHR\$(27);"O";
then press [RETURN]. (Note that the character in quotes is the letter O and not zero.) This sends a code to the printer that turns off the paper-out detector, which will stay off until you send a new code to turn it on again, or turn off the printer.

Vito A. Raia
Kenneth City, FL

ANTIC INDEX

I'd love to have an index to my collection of ANTIC magazines. I've started doing some indexing of programs on my own, though I've had to change names when the title doesn't make the program's functions clear. The next thing needed is to add in all the updates and fixes that ran in the I/O Board section.

It's just hard for me to believe that a computer magazine could not take existing files and create almost any type of index and cross-index.

Fred Brune
Kenner, LA

As you've noticed yourself, indexing magazines isn't quite as straightforward as it might first appear. There is, however, an unbelievably comprehensive index on CompuServe. This index covers all of ANTIC through the beginning of 1989. The index takes advantage of CompuServe's mainframe computers to provide a wealth of information, even some whole or excerpted articles. Unfortunately, there's no practical way to print such a huge index.

To use the Antic Index, you'll have to go online on CompuServe, which means you'll need a modem and a telecommunications pro-

gram. To find out about getting a CompuServe account, call them at (800) 848-8199, or (614) 457-0802. To get to the Index, just type **GO ANTIC** from any CompuServe menu and select **Antic Index** from the next menu. Instructions for using the index can be found in the February, 1989 issue of ANTIC.

QUIZZER QUERY

The program QUIZZER.BAS from the April/May 1990 Antic Disk seems to print only the first three questions. Repeated tries have gotten the same results, whether I try printing in normal or condensed print. Why won't all my entries print? (I have an Epson-compatible Legend 1380 printer.) Also, why must I reload the input questions every time I press the [BREAK] key?

Joseph Bartolone
Stuart, FL

Without a Legend 1380 printer, we can't explain why you're having trouble — the program works fine on all our in-house printers. Maybe another reader with that printer can help? Also, try starting over with an all-new file to make sure you don't have an odd character in your file that confuses either the computer or the printer. You have to reload the input questions because the program reinitializes every time you RUN it, tidily clearing out the memory — including your entries. Instead of using RUN to restart the program, type **GOTO 100** to return to the main menu without losing data. — ANTIC ED

AVUE ADDRESS CHANGE

We gave an incorrect mailing address in our review of AVUE, the Analog Visual Utility Environment (November 1990). The correct address is EXIT, P.O. Box 25251, Washington, DC 20007. (703) 441-1525. Checks should be made out to Norman Thornton.

\$169⁹⁵/ THE "SUPER E-BURNER!" \$169⁹⁵/
\$199⁹⁵ \$199⁹⁵

The Super E Burner is a **PROM/EPROM** copying/programming device that plugs into your Atari's cartridge port. It's the **HARDEST** most versatile EPROM programmer ever devised for Atari's 400, 800 and 1000 series. It can store up to 2732's worth of data. As speed is paramount, it can program a 27128 and double verify its contents in 15 seconds! It is a software driven device which allows the user to **READ** and/or **PROGRAM** proms/aproms and save their contents to disk or hard drive. **Only \$169.95 plus \$8.50/HV.** Mini **GANG BURNER** which is the same as above but will burn two eproms at a time is only **\$199.95 plus \$8.50/HV.**

\$49⁹⁵ "HARD DRIVE PRO BACKUP!" \$49⁹⁵

A truly useful utility for anyone owning a Hard Drive. It is the simplest, latest, most versatile HD backup program ever offered for Alan 8 bit computers! It will allow you to stream your data to floppies (up to 8 destination drives), other HD's, and a VCR compatible II and when our VCR backup interface becomes

- **SUPER FAST**
- **AUTOMATIC COMPRESSION**
to save disk space
- Allows saving to 8
DESTINATION drives!
- Allows saving to another HD
- VCR backup compatible
- Restores individual files
- Works with MYDOS or SPARTAN
- Will save to 80 TRACK drives

- Backs up by **ARCHIVE**, by **DATE**, or by selected **DIRECTORY/SUBDIRECTORY**
- Supports **ULTRA HIGH SPEED** disk I/O to capable floppy drives
- Allows **PRINTER DUMP** of all pertinent information

Only \$49.95 plus \$5 S/H/T.

\$99⁹⁵/ "XFSS1 3.5" CONVERSION!" \$99⁹⁵/
\$139⁹⁵ \$139⁹⁵

the XF551 S-35 CONVERSION kit for your XF551 drive, will enable you to store up to 750K per disk(ette) while allowing you to use the drive for "superior" 5 1/4" disk currently being used by many of the major computer manufacturers. Included with each kit is a high quality **SONY S-35** drive, completely mounted in a 5 1/4" tapecarrier assembly, all cables necessary for operation. This 35 minute format diskette is a complete solution to the problem of incompatibility problems. This is the best quality conversion of its type! Only \$99.95 plus \$8 S/H/T. A **DELUXE CONVERSION** which allows the use of the existing 5 1/4" mechanism in your XF551 drive is also available. This kit will allow you to store up to 750K on each BOTH mechanisms, on two separate drives so copying from 5 1/4" to 3 1/2" disk or vice-versa is possible even when mixing densities! And so today **WISCHLESS!** Just insert your disks and DISKettes, the rest! Kit contains all features of the standard conversions, plus the ability to format that minimal soldering is required. Only \$159.95 plus \$8 S/H/T.

\$49⁹⁵ "BLACK BOX ENHANCER" I® \$49⁹⁵

- Is a must for all serious **BLACK BOX** owners! This device simply plugs into your **BLACK BOX** and delivers the following features:
 - High resolution screen dumping in 16 shades of **GREY!**
 - Dramatically improves print quality of **TEXT** or **GRAPHICS!**
 - Built in handler will print **CONTROL** and **INVERSE** characters
 - Host built in Word Drive **TASK MASTER** utility
 - Supports **MIPOG** and **SPARTA**
 - Supports all densities
 - Built in **SECTOR EDITOR** supporting partitions up to 16 meg!
 - Displays **SECTOR** and **SECTOR** directories
 - Built in **SECTOR COPIER** utilizes off available memory
 - Copies selected sectors
 - Allows editing of **ASCII**
 - **SEARCH** by string, **ASCII** or **HEX**
 - Automatic **HEX/DEC** toggle
 - Built in **DISASSEMBLER**
 - **EDIT/SEARCH** by 11 or 16 bit links/**SPARTA** sector map/por or entire

Ends Kitchen
Clipping Clutter

Your favorite recipes can be entered easily in this simple cookbook — a specialized database that stores and prints your favorite recipes for you. This BASIC program works on all 8-bit Atari computers with 48K and Epson-compatible printer.

I wrote the Antic Cookbook because my family and I continually collect new recipes. We collect cookbooks, tear pages out of magazines, cut recipes out of the newspaper, and if all else fails we scribble the recipe down on the nearest piece of paper. When the time came to find a certain recipe we would have to search through the cookbooks or sort through the pile of clippings. Often recipes got lost, or didn't seem worth the effort needed to find them.

So, I wrote the Antic Cookbook. Now we enter in those favorite recipes and avoid the pile of paper. We still collect cookbooks, but when we find a recipe we like we enter it into "Our Cookbook." Once a year, we print up a copy of our cookbook, and staple the pages together. When the pages get food splattered on them, it's a simple matter to print up a new cookbook. Our family has been using this program for over three years now, and we find it very useful. Being very simple, it has certain limitations, but it fills our needs.

Getting Started

Type in Listing I, COOKBOOK.BAS, check it with TYPO II, and SAVE a copy to disk before you RUN it. Because the Antic Cookbook saves each recipe to disk as you go, and continually updates its index file, you should use a disk with plenty of room on it, preferably a freshly-for-

matted disk with Atari DOS 2.0 or 2.5 on it.

When you first RUN the program it searches for the recipe index on the disk. If it cannot locate an index it will tell you to "stand by" while it creates a new one. Once done, the program takes you to the Main Menu.

BY ANTHONY WATSON

Filing Recipes

The Main Menu lets you Find, Add or Alter a file (recipe). Of course, before you can find any files, you first need to enter some recipes to find. Press [2] to add a new recipe. First, type in the name of your new recipe, up to 36 characters long, press [RETURN], and the Ingredients screen will appear.

Type in the ingredients carefully, check each line as you complete it, then press [RETURN]. Once you press [RETURN] you can only correct the line by using the [CONTROL]-[ARROW] keys to return to that line and type over the information. Although some of the BASIC editor functions work (using [CONTROL]-[SHIFT]-[INSERT] to add a line, for instance), they can also mess up your files if you're not care-

ful. You did the ingredients. You can continue past the bottom of the screen, if necessary. When you are done, check over your text, and press [ESCAPE]. The new recipe file will be saved to disk, and the program will then return you to the Main Menu.

Now that you have some recipe files entered, press [1] from the Main Menu to find a specific file.

The program will show you the first 20 recipe files in its index, out of a possible 60. Press the [SPACE-BAR] to see the rest of the titles.

If you don't want to view a recipe, press [ESCAPE] to return to the Main Menu. If you do want to see one of the recipes, simply press the number beside it. Then choose whether you want to see the recipe on the screen, or have it printed in 40 columns or

ingredients and the directions. To return to the Main Menu, press [ESCAPE].

Altering Files

From the Main Menu, press [3] to alter a file, then choose which file you want to change. From the new menu that appears, you can rename the recipe you've chosen, replace it with a new recipe, or erase it. If you choose to erase a recipe by mistake, you can retrieve it as long as you do not replace it with a new recipe. Choose Alter File, then specify the blank space, and rename it (any name will do). Your data should still be in place.

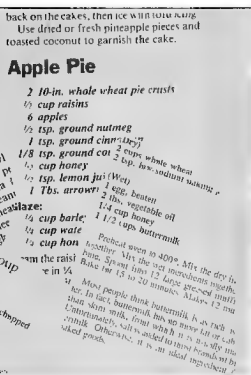

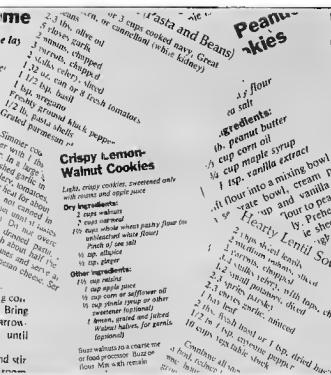

Unfortunately, you can't go back and make changes in your recipes once you've entered them. Instead, you'll need to replace the recipe with a new version, retyped from scratch. The program only allows 60 recipes in its index. Even so, I often run out of space before the index is full. I overcome this limitation by using separate disks (each with their own copy of the cookbook) for different kinds of recipes, like MEALS or DESSERTS.

Unfortunately, you can't use DOS to transfer recipe files from one disk to another, because you need to update the index when adding or deleting any recipe files. (You could copy the whole disk and use the Cookbook program to erase any recipes you didn't want, of course.)

Despite its limitations, the Antic Cookbook has served my family well. (It sure beats all those little slips of paper with recipes scribbled on them.) I hope you enjoy the Cookbook as well. Happy Cooking!

Listing on page 99.

Anthony Watson of Vancouver, WA is a 26-year-old Electronic Technician currently working as a househusband to take care of his newborn daughter.

ful. Be extremely cautious when using any of the [CONTROL] combinations, and avoid adding too much text to any line.

When you've entered all your ingredients, check them carefully, as you will not be able to make any further corrections once you leave this screen! When you are certain the ingredients are correct, press [ESCAPE] to go to the Directions screen. Enter the directions just as

80 columns. The 40-column option should work with most printers. The 80-column routine is configured specifically for the Star NX-1000 printer, but should work with most Epson-compatible printers.

Onscreen, some of the recipes with lengthy instructions may scroll by too fast for you to read. If that happens, use [CONTROL]-[H] to stop and restart the text. Press [RETURN] to go back and forth between the in-

CANFIELD SOLITAIRE

Break the bank with this gambler's version
of the popular card game

BY KEVIN O'NEILL

Test your wits and bet your money with this tricky version of solitaire. Your 8-bit keeps a running total of your winnings (or losses) in this BASIC card game. This program runs on Atari 8-bit computers with at least 48K memory and disk drive.

I found this interesting gambler's version of Canfield Solitaire in Hoyle's Book of Games. The basic rules are easy: The player buys a deck of cards for \$50, then receives \$5 for every card played on the foundation piles. If all 52 cards end up in the foundation, the player gets \$500.

Getting Started

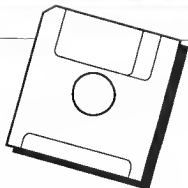

Type in Listing 1, CANFIELD.BAS, check it with TYPO II, and SAVE a copy to disk before you RUN it.

The computer first asks if you want cards dealt from the hand one at a time or in groups of three (more on this below). Make your choice by pressing the appropriate number. The computer shuffles the cards, then takes 13 cards off the top and

puts them in the stock pile, face up. The next card is the first foundation. You've got \$5 already — on your way to easy street. Next, four cards are laid side-by-side in the tableau, face up. The rest of the cards become the hand, to be played into the deck. Just to make things easy for players, the piles are all labeled onscreen, each separated pile identified by a letter, A-J.

The first card in the foundation sets the value for the foundations in all four suits. When (or if) cards with that value turn up, place them in the other foundation positions. Build the foundations up by rank and suit. The card order wraps around, with the ace above the king and below the two.

For example, if the first foundation card is the Queen of Hearts, the next cards played on that foundation would be (in order) the K, A, 2,

handling & mailing.

the stock, and only cards in the hand may be played to the deck.

Moving the Cards

You move the cards with the keyboard. Each pile is marked with a letter, A-D for the foundation, E-H for the tableau. The stock is I, and the deck is J. To deal a card (or set of three cards) from the hand, just press the space bar. To move a single card, press the letter of its current pile, then the letter of its destination. To move a group of cards within the tableau, first press [T], then the letters of the two piles involved.

The computer will let you know once you've gone through the deck. If you are using the three-card play option, you can keep going through the deck, over and over. When you have come to a standstill, press [ESC] and your current winnings (or losses) will be tabulated. You can then [S]tart a new game, [C]hange the number of cards dealt from the deck, or [Q]uit.

Listing on page 95

Kevin O'Neil is a musician and printer from Westminster, Colorado. Though this is his first program to appear in ANTIC, he was a runner up in the ANTIC Music Precursor song challenge (ANTIC, June 1989) and in the Rebound screen design contest (ANTIC, August 1987).

3...up to J, all in Hearts. You win the game, not to mention \$500, when you build all four foundations up to thirteen cards.

The Tableau

The tableau builds down, black on red and red on black. Thus, the four of diamonds could be played on the five of spades or clubs. These piles also wrap around, with aces on twos and kings on aces. The top card of each tableau pile may be moved by itself, or the entire tableau pile may be moved as a unit, if its bottom card may be correctly played on the top of the destination pile. Empty spots in the tableau may be filled from the stock, the deck, or the top card of a tableau pile.

The cards in the hand may be turned up in sets of three, in which case you can keep going through the hand until you get stuck. The hand may also be played one card at a time, once through.

You may play off either the stock or deck onto the tableau or foundations. Cards may be moved within the tableau, or moved from the tableau onto the foundations. Once in a foundation, a card cannot be moved. Cards may not be played to

TYPING SPECIAL ATARI CHARACTERS

The Atari Special Characters and the keys you must type in order to get them are shown below:

For [CONTROL] key combination, *hold down* [CONTROL] while pressing the next key. For inverse [CONTROL] [A] through [CONTROL] [Z], press the [Z] key—or [A] on the 400/800—then *release* it before pressing the next key. (Press [Z] or [A] again to turn off inverse.) For [ESC] key combinations, press [ESC] and then *release* it before pressing the next key.

Carefully study the chart above and pay close attention to differences between lookalike characters such as the slash key's [/] and the [CONTROL] [F] symbol [Z].

TYPO II AUTOMATIC PROOFREADER

TYPO II automatically proofreads Antic's type-in BASIC listings. Type in the listing below and SAVE a copy to disk or cassette. Now type GOTO 32000. At the prompt, type in a single program line **without the two-letter TYPO II code at the beginning**. Then press [RETURN].

Your line will reappear at the bottom of the screen. If the TYPO II code does not match the code in the magazine, then you've mistyped your line.

To call back a previously typed line, type [*], then the line number, then [RETURN]. When the completed line appears, press [RETURN] again. This is how TYPO II proofreads itself.

To LIST your program, press [BREAK] and type LIST. To return to TYPO II, type GOTO 32000. To remove TYPO II from your program, type LIST "D:FILENAME",0,31999, then [RETURN], then NEW, then ENTER "D:FILENAME", then [RETURN]. Now you can SAVE or LIST your program to disk or cassette.

Don't type the
TYPO II Codes!

#1 Guide To Atari Computing

START

COMING NEXT MONTH

TT Review!

Ever-popular ST gurus David Small and Doug Wheeler give you the inside scoop on Atari's new baby.

Meet Bab Bradie!

His official title reads Manager of User Group Services, but unofficially he's the Atari user's best friend.

C For Speed!

Here's a nifty bag of tips and techniques to make that turtle-slow code run rabbit-quick.

Plus Lynx game reviews!

NEXT MONTH

VerSys

The Programmer's Perfect Backup Utility

Kwajalein

New Dimensions In Tic-Tac-Toe

Numeric Keypad Drill

Ten-Key Touch-Typing Tutor

Atari User-Group List

Thought you were the lone ST? Guess again!

Buy Now!

Back Issues SALE

Complete Your Atari "Toolkit"

INCREDIBLE SAVINGS

How To Order:

Simply tell us if you want special offer
A, B, C, or D corresponding to the
following selections:

- A - 1 back issue Antic magazine and Disk.
- B - "GRAB BAG" special offer 12 Back issues
Antic and Disk
- C - Complete Antic Library ('83 to '89)
- D - Additional Antic library ('88 and '89)

** Availability Limited see opposite page of Back issue Antic
magazine and disks.*

Prices

A - Any 1 available Back issue of Antic
magazine and Disk per issue **\$7.00**
Plus shipping and handling (per issue) \$1.00

B - "GRAB BAG" special offer any 12 available
Back issues of Antic magazine and Disks **\$49.95**
Plus shipping and handling \$9.00

C - Complete Library **\$129.95**
Plus shipping and handling \$20.00

D - Additional library **\$49.95**
Plus shipping and handling \$10.00

Kristin on the periphery, appearing to be a critic or advocate.

In the second year of the reign of the Emperor Kristin IV, the Aurilian Empire is beset by danger from wars on the frontier and from conspiracy within. On the galactic periphery, a newly formed federation of worlds sees an opportunity to expand at the Empire's expense. For the citizen-soldiers of the Federation this would be the adventure of a lifetime. For the grizzled veterans of the Empire, it was JUST ANOTHER WAR IN SPACE!

Time: 38.67 min. (DTIME: 28.00)

- ◆ Accurate simulation of 3-D, real-time, Newtonian spaceflight mechanics
- ◆ 30 different commands, and multiple command options
- ◆ 7 scenarios, each with optional set-up features
- ◆ Use computer-generated spacecraft, or design your own from modular components
- ◆ Easy-to-use, mouse-driven, window-oriented interface
- ◆ Assume the role of spacecraft captain, task force commander, or fleet commander for the Empire or the Federation

Requires Atari ST or Mega ST, 1 Megabyte RAM, Double-Sided, Double-Density Disk Drive, Color Monitor.
